Arch 531 The Natural Landscape
Fall 2013 — Thursdays — 5:00–7:50 P.M.
Location: AHF B57A

Instructor: Travis Longcore, Ph.D.
Office: B55D AHF
Office Hours: Wednesday, 2–6 P.M., Third Floor Watt Hall
Websites: blackboard.usc.edu; lore.com
Contact Info: longcore@usc.edu, (310) 247-9719 (mobile), travislongcore (Skype)

Course Description
The course of study in Landscape Architecture is rightly focused on design. Students explore how, through design interventions, places can be made that “work,” often from an experiential, aesthetic, or social perspective. As landscape architects become leaders in sustainability and in the field of ecological restoration, there is recognition that designed places must also work as a component of the natural landscape and projects are called upon to perform ecosystem functions. The purpose of this course is to provide the necessary scientific background on the patterns, processes, and performance of the natural landscape — defined as the surface of the Earth with minimal human intervention — to inform design options ranging from plant choice to patch size to corridor configuration.

The course has two modules: world vegetation and landscape ecology.

The first half of the course will build an understanding of the patterns of vegetation found across the surface of the Earth and the biophysical processes that determine that distribution. This investigation starts with the broadest elements of the Earth’s climate and how these physical factors interact with plants to create the characteristic landscapes found in different regions around the world. Special attention will be paid to the types of plants found in each of these landscapes, both to understand their function, but also to inform future plant choices in landscape design. Each of the major biomes of the world will be reviewed.

The second half of the course will introduce the topic of landscape ecology, building an understanding of how the patterns on the natural landscape influence species distribution and ecosystem function. An appreciation of the function of patches in the landscape will emerge from the foundational Theory of Island Biogeography. Potential design elements, such as edges, patches, corridors, and networks, will be explored in terms of the natural landscape and their performance to support ecosystem function and species diversity.

Learning Objectives
By the end of this course, students should be able to:

• Identify characteristics of plants that allow for survival in extremes of heat, drought, saturation, salts, and other environmental conditions.
• Locate and name the areas of the Earth that contain representations of a particular set of climatic, soil, and disturbance conditions.
• Describe the role of disturbance in structuring vegetation communities across different climatic conditions.
• Recall the basic patterns of global climate relevant to plant distribution.
• Identify the conditions that promote high plant diversity and locate those regions that have high and low plant diversity.
• Explore the potential results of global climate change on vegetation.
• Explain the foundations of the Theory of Island Biogeography and its influence on understanding species diversity.
• Describe the attributes of landscape patches and edges that influence species diversity and distribution.
• Have a basic understanding of population dynamics, extinction, and metapopulations with respect to landscape pattern.
• Understand the role of corridors in species dispersal and describe the attributes that contribute to corridor performance.
• Be able to identify and describe stream and river form and dynamics related to rainfall and topography.

Recommended Preparation
Undergraduate life sciences general education.

Required Readings

These two texts can serve as references for years to come, so despite their cost, both are required. Lower-cost used and electronic editions are available.

Description and Assessment of Assignments
The class exercises will be assigned at regular intervals throughout the semester. These assignments involve interpretation and application of the material presented in lecture and the texts.

Exercises will be assessed on the basis of creativity, design, and scholarly content. Some exercises require freehand illustration and creative design based on course materials. The ideas conveyed by these designs, as well as the incorporation of course material, will contribute to grades. Quality of drawing is not an element contributing to the grade, given the broadly different backgrounds, but non-design students must make a careful and thorough effort.

Grading Breakdown
Grades will be assigned according to performance in five exercises (50%), five quizzes (50%).

Letter grading
A+ 97.0–100 %
A  93.0–96.9 %
A− 90.0–92.9 %
B+ 87.0–89.9 %
B  83.0–86.9 %
B− 80.0–82.9 %
C+ 77.0–79.9 %
C  73.0–76.9 %
C− 70.0–72.9 %
D+ 67.0–69.9 %
D  60.0–66.9 %
F  <600 %
Pass/Fail grading
Pass:  ≥73.0 %
Fail:  <73.0 %

Assignment Submission Policy
Assignments are to be submitted at the start of class on the day the assignment is due.

Attendance Policy
The School of Architecture’s general attendance policy is to allow a student to miss the equivalent of one week of class sessions (three classes if the course meets three times/week, etc.) without directly affecting the student’s grade and ability to complete the course. If additional absences are required for a personal illness/family emergency, pre-approved academic reason/religious observance, the situation should be discussed and evaluated with the faculty member and appropriate Chair on a case-by-case basis. For each absence over that allowed number, the student’s letter grade will be lowered 1/3 of a letter grade (e.g., A to A–).

Any student not in class within the first 10 minutes is considered tardy, and any student absent (in any form including sleep, technological distraction, or by leaving mid class for a long break) for more than 1/3 of the class time can be considered fully absent. If arriving late, a student must be respectful of a class in session and do everything possible to minimize the disruption caused by a late arrival. It is always the student’s responsibility to seek means (if possible) to make up work missed due to absences, not the instructor’s, although such recourse is not always an option due to the nature of the material covered.

Being absent on the day a project, quiz, paper or exam is due can lead to an “F” for that project, quiz, paper or exam or portfolio (unless the faculty concedes the reason is due to an excusable absence for personal illness/family emergency/religious observance). A mid term or final review is to be treated the same as a final exam as outlined and expected by the University.

Supplemental Readings

The following readings are provided for students to explore the topics presented beyond the required readings and lectures. These readings will be useful as background for the exercises and for further detail about particular topics. Only those noted in the Course Schedule are required and those will be posted on the course website for easy access.

Statement for Students with Disabilities

Any student requesting academic accommodations based on a disability is required to register with Disability Services and Programs (DSP) each semester. A letter of verification for approved accommodations can be obtained from DSP. Please be sure the letter is delivered to me (or to TA) as early in the semester as possible. DSP is located in STU 301 and is open 8:30 a.m.–5:00 p.m., Monday through Friday. Website and contact information for DSP: http://sait.usc.edu/academicsupport/centerprograms/dsp/home_index.html, (213) 740-0776 (Phone), (213) 740-6948 (TDD only), (213) 740-8216 (FAX) ability@usc.edu.

Statement on Academic Integrity

USC seeks to maintain an optimal learning environment. General principles of academic honesty include the concept of respect for the intellectual property of others, the expectation that individual work will be submitted unless otherwise allowed by an instructor, and the obligations both to protect one’s own academic work from misuse by others as well as to avoid using another’s work as one’s own. All students are expected to understand and abide by these principles. SCampus, the Student Guidebook,
(www.usc.edu/scampus or http://scampus.usc.edu) contains the University Student Conduct Code (see University Governance, Section 11.00), while the recommended sanctions are located in Appendix A.

**Emergency Preparedness/Course Continuity in a Crisis**

In case of a declared emergency if travel to campus is not feasible, USC executive leadership will announce an electronic way for instructors to teach students in their residence halls or homes using a combination of Blackboard, teleconferencing, and other technologies.

**Accreditation**

The Master of Landscape Architecture degree program includes three curricula. Curriculum +3 for students with no prior design education and Curriculum +2 for students admitted with advanced standing have full accreditation by the Landscape Architecture Accreditation Board. Curriculum +1.5 for students with advanced placement is a post-professional study and is not subject to accreditation. Information about landscape architecture education and accreditation in the United States may be found on-line at http://www.asla.org/Education.aspx.
