SSCI 586 (35760), GIS Programming and Customization

Units: 4  
Term: Spring 2015  
Location: Online at http://www.usc.edu/blackboard  

Instructor: Jennifer N. Swift, Ph.D.  
Office: AHF B57D  
Office Hours: Tues and Thurs 1-2 p.m. PT; also available most other days by appointment via email.  
Contact Info: jswift@usc.edu  
Adobe Connect: usccollege.adobeconnect.com/jswift  
Skype: ssb27q  

Library Help: Andy Rutkowski  
Office: VKC B38B  
Hours of Service: Mon. 1-3 p.m.; Thur. 10-12 p.m. PT, or other times by appointment via email.  
Contact Info: artukows@usc.edu, 213-740-4415  

IT Help: Richard Tsung  
Hours of Service: Mon.-Fri. 9 a.m. – 5 p.m. PT  
Contact Info: gistsupport@usc.edu, 213-821-4415  

Course Description

GIS programming skills are now an essential part of the GIS professional’s portfolio. Learning to program facilitates understanding of one’s use of GIS as well as how to interact with others who use GIS software. Familiarity with a GIS programming language and how it is implemented also provides in depth insight into how other programmers create and use these tools. Helping you become comfortable with coding and thoroughly documenting novel GIS tools that can be readily shared with a crowd is the goal of this course.

Why should you take this course? This course will provide you with the most up-to-date software tools and information necessary for building and implementing customized GIS mapping applications and geoprocessing functions according to current industry standards. It is assumed that students taking this course are new to programming and have no prior experience. Essential practical as well as theoretical concepts of GIS modeling and its translation into GIS software development and object-oriented programming are covered. In addition, you will learn the Python programming language and its use in developing customized GIS applications directly applicable to your own field of interest. Overall, you will gain a deep and solid foundation for programmatically interacting with Esri’s ArcGIS ecosystem.
This is a graduate level course, so you should expect this class to be intellectually challenging. As graduate students you are expected to engage with the information you are learning and to explore the heady cauldron of ideas, opinion, and analysis that describe our collective effort to thoroughly interrogate the subject at hand. Learning arises from active engagement with the knowledge found in our reading materials and with one another. As in any graduate class, the instructor’s role is that of a guide who keeps you on this path of discovery and you will find that you will learn much from your fellow classmates. The challenge for the instructor is to replicate such an academic experience within the milieu of “online learning.”

All course materials will be organized through Blackboard. The main theoretical concepts will be provided through text readings and self-directed research you will do in the published literature and on the web and through hands-on experimentation with various tools and technologies.

**Learning Objectives**

When you have completed this course, you will be able to:

- Familiarize yourself with different programming languages commonly used in GIS customization, and how to use these technologies to expand upon exiting GIS software functionality.
- Perform object-oriented programming tasks using various programming languages, such as Python.
- Analyze design procedures and interactions for modeling with GIS.
- Program small-scale GIS-based models in Python, integrated within ArcGIS.
- Understand general software engineering concepts and good programming methods and practices.
- Critically evaluate different methodologies for developing applications in GIS.
- Conceptualize, plan, implement, and write up the results of an original GIS mapping application, customization, automation and/or extension.

**Prerequisite(s):** None

**Co-Requisite(s):** None

**Concurrent Enrollment:** None

**Recommended Preparation:** SSCI581: Concepts for Spatial Thinking

**Course Structure**

The course will unfold on a weekly basis. Each week will be focused on a particular aspect of GIS programming and customization. In order to encourage collaboration, the class will be divided into small groups to work on several programming assignments. Group members will share and test each other’s work in brief Discussion threads (on-line). You will finish the course by completing a GIS programming project on a topic of your choice on your own.
Technological Proficiency and Hardware/Software Requirements

We have several technologies that will facilitate our course work and our interactions, despite our dispersed locations. These include:

**Blackboard** – All course materials and correspondence will be posted on the course Blackboard site. As a registered student, you will find this course will show up in your available classes no later than 12:00 noon, PT on the first day of classes. It is here that the day-to-day flow of the course will be recorded.

**Discussion boards** – On the Blackboard site, we will post a number of discussion threads related to various course topics. These threads are very important in terms of providing support to each other while working on class exercises to share hints and helpful tips, as you would do in a classroom setting. I will check the discussion threads periodically and offer occasional comments. Please send your course instructor an email directly if you have a question or concern that requires immediate attention.

**Live meetings and presentations** – We will use a browser-based service called Adobe Connect to create synchronous, interactive sessions. With voice and webcam capabilities, Adobe Connect can be used to share presentations and even our desktops between two or more people.

**Individual meetings** – While Adobe Connect can be used for one-on-one meetings, we generally find it easier to use the free VOIP and chat technology, Skype (http://www.skype.com/) for individual chats.

**GIST server and tech support** – This course will utilize the SSI GIST Server which is a virtual desktop. You access the GIST Server at https://gistonline.usc.edu. If you are unable to connect to the server or experience any type of technical issues, send an email using your USC account to GIST Tech Support at gistsupport@dornsife.usc.edu, making sure to copy (cc) me on the email. GIST Tech Support is available Monday through Friday, 9 a.m.-5 p.m. PT.

ArcGIS is provided online via the GIST Server; hence, you do not need to install it on your own computer. Instead, every student must have the following technology requirements:

- A computer with a fast Internet connection.
- A functional webcam and a microphone for use whenever a presentation or meeting is scheduled.
- A current web browser, Firefox recommended, to access the GIST Server

**Required Readings and Supplementary Materials**

The required textbooks for this course are:

The aforementioned textbooks will be supplemented with Course Notes and a mixture of readings from academic journals, professional reports and authoritative websites. Additional readings relevant to students’ interests as well as course themes will be identified as part of the literature search components.

Readings – To be posted to Blackboard under Course Documents:

Description and Assessment of Assignments

Your grade in this course will be determined on the basis of several different assessments:

Resume Assignment (2%) – We require all current students to post and maintain a public resume, short biography and recent photo on our shared GIST Student Community Blackboard site. Unless you opt out, your photo and short biographical sketch may be posted to the Spatial Sciences Institute website and your resume will be included in the GIST Resume Book. The latter is compiled annually and along with our Web presence used to promote our programs and more importantly, your skills, experience, and professional aspirations.

Reading Assignments (8%) – These will focus on the theory portion of the course as presented in the weekly readings. Their objective is to help you evaluate and integrate the information you have acquired from the course readings. Some of these will involve discussions and collaborative work and some will be individual efforts.

Discussion Forums (6%) – These will focus on varying combinations of theory and practice and anticipate that you will contribute to and participate in a series of discussion threads at designated times throughout the semester.
Programming Assignments (44%) – In order to demonstrate that you understand the basic concepts and skills learned in the class, you will complete ten hands-on assignments that involve the use of Python and/or ArcGIS. Once you have completed each assignment, you will turn in a quick copy of some digital output from the final part of the assignment such as a .jpg at the final step, and/or some combination of a few brief text answers, the code itself or an installation package resulting from your code.

Final Project (40%) – To integrate your learning of all the material covered in the course, in the final project you will design, undertake and report on an individually chosen GIS Programming project that will be the context of discussion in several of the assignments. The five components of the Final Project are:

- **Proposal - 10 points.** Two meetings (live via Adobe Connect) and a brief written description of the GIS programming and customization application(s) you would like to build and how you plan to do it.
- **Presentation - 5 points.** A presentation made on-line via Adobe Connect, open to all students in the course.
- **Installable Application - 10 points.** The installable will consist of the code, compiled if applicable, and any data required to run your application. The application must work as described in your Final Project Report.
- **Final Project Report - 10 points.** A written report on your project methodology, data and outcomes, including how to install and run your application.
- **Videos – 5 points.** You will create two short videos that describe and demonstrate your project. The first will cover your presentation, and the second will be a live demonstration of your application.

**Grading Breakdown**

The table below summarizes the SSCI 586 course assessments and their point distribution:

<table>

Assignment Submission Policy

Unless otherwise noted, assignments must be submitted via Blackboard by the due dates specified in the Course Schedule below and on the assignment instructions.

Unless otherwise noted, Reading Assignments are due by 11:59 p.m. Pacific Time (PT) on Mondays and Programming Assignments are due on Fridays. Project components have different due dates as indicated on the Course Schedule below. Your attention to on-time assignment submission is essential if I am to meet my goal to return comments on your submitted assignments before the next one is due. Sometimes this is impossible, so I will post a notice on anticipated delays if needed.

Strict penalties apply for late assignments as follows:

- All assignments will be penalized 2 points up to FOUR days late. No points will be given for submissions more than FOUR days late. Note that all assignments worth 2 points will receive 0 points if submitted late.
- Additionally, no written work will be accepted for grading after 5 pm PT on the last day of classes.

Additional Policies

Communications – This is a distance learning course, so most of our interactions will be asynchronous (not at the same time). All materials to be handed in will be submitted via the Blackboard Assessment link. I will also create multiple Blackboard discussion forums throughout the semester that we will use for the aforementioned assignments and so we can discuss issues and comments on the course assignments, exercises and projects as the need arises.

In addition, I will send via e-mail through Blackboard any notices that are time sensitive. Please be sure that you read as soon as possible all e-mail sent from Blackboard or from me. Check now to make sure that mail sent from both the USC blackboard accounts and my private domain (jswift@usc.edu) does not go into your junk mail! While I am usually online and will probably respond to e-mails from students relatively quickly, I will endeavor to respond to all e-mail within 24 hours of receipt, aiming for no more than 48 hours delay. In the rare case when I expect to be offline for more than 72 hours, I will post an announcement on the Blackboard site.

That said, it is each student’s responsibility to stay informed about what is going on in our course. In addition to e-mail about time-sensitive topics, any important announcements will be posted on the Announcement page in Blackboard. Be sure to check these each time you log onto Blackboard.

Workload – This is a four credit, one semester course. Students should expect to spend 12-15 hours per week completing the work in this course.

Statement on Academic Conduct and Support Systems

Academic Conduct

Plagiarism—presenting someone else’s ideas as your own, either verbatim or recast in your own words—is a serious academic offense with serious consequences. Please familiarize yourself with the discussion of plagiarism in SCampus in Section 11, Behavior Violating University Standards https://scampus.usc.edu/1100-behavior-violating-university-standards-and-appropriate-sanctions/. Other forms of academic dishonesty are equally unacceptable. See additional information in SCampus and university policies on scientific misconduct, http://policy.usc.edu/scientific-misconduct/.

Discrimination, sexual assault, and harassment are not tolerated by the university. You are encouraged to report any incidents to the Office of Equity and Diversity http://equity.usc.edu/ or to the Department of Public Safety http://capsnet.usc.edu/department/department-public-safety/online-forms/contact-us. This is important for the safety whole USC community. Another member of the university community – such as a friend, classmate, advisor, or faculty member – can help initiate the report, or can initiate the report on behalf of another person. The Center for Women and Men http://www.usc.edu/student-affairs/cwm/ provides 24/7 confidential support, and the sexual assault resource center webpage sarc@usc.edu describes reporting options and other resources.

Support Systems

A number of USC’s schools provide support for students who need help with scholarly writing. Check with your advisor or program staff to find out more. Students whose primary language is not English should check with the American Language Institute http://dornsife.usc.edu/ali, which sponsors courses and workshops specifically for international graduate students. Office of Disability Services and Programs

http://sait.usc.edu/academicsupport/centerprograms/dsp/home_index.html provides certification for students with disabilities and helps arrange the relevant accommodations. If an officially declared emergency makes travel to campus infeasible, USC Emergency Information http://emergency.usc.edu/ will provide safety and other updates, including ways in which instruction will be continued by means of blackboard, teleconferencing, and other technology.

Resources for On-line Students

Our course Blackboard site provides links to several different resources that you may need. In particular, you will be making frequent use of the on-line USC Library that is available to all registered students through the link http://www.usc.edu/libraries. Once on this site, you can find additional resources for distance students under the link “Library Services”. Many other resources and links to key people you may need to contact are also listed on the Blackboard site under Other Resources and Contacts.
