Introduction to Game Development – Spring 2016 Syllabus

Instructor
Margaret Moser

Student Assistants
Aadit Doshi; TBA

Course Description
In this core course for the Interactive Media and Games Division, students will learn the art of creating digital game prototypes. The class is taught in the Unity game development environment using C# scripting.

This combination of tools gets students making games quickly while also teaching the fundamentals of game programming. Unity is a professional tool in widespread use, including on award-winning, high-profile games such as Monument Valley, The Room 1-3, Threes!, Assassin’s Creed Identity, and many more. It can be used to create games for many platforms (Mac, PC, web, iOS, Android, etc.)

We will also introduce basics of Agile, the industry-standard production methodology, and the use of version control systems in developing code.

By the end of this course, you will have the skills to create digital prototypes of your own ideas. You should not expect to come out of this course a great programmer, but you will come out a better designer, equipped to explore and test your ideas without needing help.

Course Rationale
All designers need the ability to communicate their ideas to others. Because games are interactive, a functioning prototype communicates the designer’s ideas more clearly than any static description can. A game designer’s ability to prototype is thus equivalent to a cinematographer’s ability to sketch – while the skill does not directly appear in the final product, it allows the designer to refine his or her ideas and communicate them in a direct way to both team members and test audiences.

A good prototype is literally an experiment; it asks questions about game design. More often than not, prototypes prove that a given design direction is not worth further pursuit. This may appear to be a “failure,” but in fact it is valuable information that helps you make good design choices. The ultimate goal for students in this program – this semester and after – is to develop innovative and compelling games, and prototyping is the fastest, surest way to achieve that goal.

Learning to write code has other significant benefits. Designers who understand code can collaborate more effectively with the engineers on a team, and make more informed decisions when implementation issues come up.
In addition, the rules, patterns, and behaviors that form the game experience are a direct reflection of the underlying code. Code is the raw material with which interactive experiences are built, as pottery is made of clay and paintings are made of paint. The designer who understands code therefore has a much deeper understanding of games as a medium.

**Course Pre-requisites**

None, though either CTIN 101 or CSCI 101 is recommended. If you are working with code for the first time, you should expect to commit extra time to classwork each week.

**Class Meetings**

Mondays and Wednesdays 10-11:50am, SCA room 356. Beware, this room is hard to find.

**Course Communications**

We will use a variety of technical tools to communicate. The central source of information will be the Slack channel, ctin483.slack.com.

Most assignments and materials will be made available through the Perforce version control system, which will be explained in class. Most communications, including announcements, will go through our class Slack channel. This is also the best place to ask questions.

You may contact me at mmoser@cinema.usc.edu regarding absences, grades and other administrative issues. You must use your @usc email address. Please allow at least 24 hours for a response.

**Office Hours**

**Professor Moser**

Tuesday 1pm-3pm, or by appointment

**SAs**

TBA; will be provided in a Google calendar

During these times we are available for drop-in support in the department offices in SCI 201, near the arcade machine on the second floor. You can also reserve a 15-minute slot within these hours, or request appointments at other times, through the Slack channel.

**Materials**

Generally, technical books go out of date very quickly, and it is difficult to justify the investment. However, each of these resources covers not just the details of how to use the tools but important concepts and techniques in programming and game development.
These are the required materials:

*Introduction to Game Design, Prototyping, and Development* – Jeremy Gibson

*Learn To Code by Making Games* – Ben Tristem & Brice Fernandes, on udemy.com

Note that Udemy regularly offers deep discounts – up to 95% – to those who wishlist a course. This course is available for $10 through January 11, 2016 using the code RESOLVE10.

We will use Unity 5.3.1 for this semester’s class. You can download the free version of Unity from http://unity3d.com/download. Many students also choose to spend a small amount (on the order of $20-30) on tools and art assets from Unity’s Asset Store. However, many assets and tools on the store are free, and no paid assets are required.

### Evaluation of student performance

</tbody>
</table>

**You are responsible for understanding assignments.**

In this class, good work and satisfying all of the requirements of the assignments will earn a student a B. To receive an A, a student must show creative, exceptional work that goes beyond the basic requirements of each assignment and brings something creative or otherwise impressive to the work.

While visual art can contribute to this transition from B to A, graphical ability is not otherwise graded in this class. CTIN 483 is about learning to make interactive prototypes, and students will not earn credit for art unless all of the programming requirements for the assignment or project are already met. This applies to the pair projects as well; each student must contribute equal effort to the coding.

**All homework and projects must be turned in before the beginning of class.** I will download what is on the class repository at the moment class begins; anything turned in after that will not be graded. If you have trouble getting your work into the repository, you must contact the class email by **8pm the night before** the assignment is due. If you have done so then I may (at my discretion) allow you to turn in your work during class. This is the only exception.
During the tutorial phase of the class, homework will be assigned in almost every class. These assignments will be pass/fail based on whether the student followed instructions and demonstrated an effort to complete the assignment. I will drop your lowest homework grade at the end of the semester.

Most assignments will require you to make things in Unity. When you make something in Unity, you must turn in a build with functioning code. We will go over in class what a build is, how to make one, and how to turn it in. If it doesn’t do everything it’s supposed to, but shows effort, you will still receive credit. If it doesn’t run at all, you will not receive credit.

Participation consists of participating in class discussions and exercises and coming to office hours, in whatever combination you like. Participation is also affected by attendance (see below for attendance policy).

Course Outline

**Week 1 – Week 6: Introduction to Unity and C#**

Structure: During this part of the semester, students will be instructed in various aspects of game prototyping using C# and Unity. We will go over general syntax and code structures in C#, how to use the Unity editor, and how to work with Unity objects through code.

Assignments: Individual assignments each week. All assignments are pass/fail.

**Week 7 – Week 10: Classic Game Project**

Structure: We will continue with lectures during the first class meeting of each week. In the second class meeting of each week students will present their in-progress builds.

Assignment: Pair assignment due Week 10. Students will work in pairs to create a game prototype that mimics the mechanics and "game feel" of a classic game from the 8-bit era.

Due Wednesday, March 23

**Week 11 – Week 15: Final Game Project**

Structure: We will continue with lectures during the first class meeting of each week. Students will also turn in a small prototype for this first meeting. In the second class meeting of each week students will present their in-progress builds.

Assignment: Pair assignment due during the final exam period. Students will create a new, unique game prototype. This project should both showcase the skills that they’ve learned throughout the semester and express a unique game design vision.

Beta due Wednesday, April 27
Final Exam

Students will add polish to their final games and submit them to the class repository.

Due at 11:59pm on Monday, May 9

Absence Policy

Students are expected to attend every class. This is for your own sake – we will move quickly, and it is easy to fall behind. The following guidelines, from the Interactive Media Division handbook, apply to all students:

- Two unexcused absences: lowers course grade one full grade point.
- Three unexcused absences: lowers course grade two full grade points.
- Four or more unexcused absences: request to withdraw from course (instructor’s discretion)

If you are absent without excuse on a day when your team is presenting your classic or original game project, you will receive a zero for that turn-in. If you miss more than fifteen minutes of any class, it will count as an absence. Additionally, I may ask you to withdraw if your total absences become excessive, even if they are excused.

The only excused absences are for illness, family emergencies, and (with advance notice) commitments related to a scholarship you are receiving, e.g. for a varsity sport. You must contact me as soon as possible regarding your absence. Generally I will expect to hear from you before class; in exigent circumstances I would expect to hear from you within 24 hours. If I do not hear from you in a timely fashion you may forfeit your option to make up what you have missed.

All that said:

1. **If you are sick, stay home.** You need to be healthy to learn, and so do your classmates (and instructors).

2. I do not distinguish between mental health and physical health. If you cannot complete an assignment on time or come to class because of mental health issues, you must contact me promptly, just as with physical health problems.

Incompletes

The only acceptable reasons for taking an incomplete in the course are personal illness or a documented family emergency. Students who wish to take incompletes must present documentation of the problem to the instructor before final grades are due. Incompletes are not available before the Week 12 withdrawal deadline.
Conduct

In this class, we make a commitment to foster a welcoming and supportive environment where students of all identities and backgrounds can flourish. This means that we will issue content warnings as appropriate, use preferred pronouns, and respect self-identifications. While debate and discussion are welcome, please remain aware of the implications of your words and the images that you include in your work. If the instructor or another student points out that something you have said or shared with the group might be offensive, avoid being defensive; this is a valuable opportunity for us to grow and learn together.

If you have a concern about any aspect of the class, you are encouraged to speak with the instructor. If you feel uncomfortable speaking with the instructor, you are also welcome to speak with either the undergraduate or graduate advisor for the division, who can discuss the issue with you directly or point you toward other on- and off-campus resources for addressing your concern.

Behavior that persistently or grossly interferes with classroom activities is considered disruptive behavior and may be subject to disciplinary action. Such behavior inhibits other students’ ability to learn and an instructor’s ability to teach. A student responsible for disruptive behavior may be required to leave class pending discussion and resolution of the problem and may be reported to the Office of Student Judicial Affairs for disciplinary action.

Note for Students with Disabilities

Any student requesting academic accommodations based on a disability is required to register with Disability Services and Programs (DSP) each semester. A letter of verification for approved accommodations can be obtained from DSP. Please be sure the letter is delivered to me (or to an SA) as early in the semester as possible. DSP is located in STU 301 and is open 8:30 a.m.–5:00 p.m., Monday through Friday. The phone number for DSP is (213) 740-0776.

Academic Integrity

USC seeks to maintain an optimal learning environment. General principles of academic honesty include the concept of respect for the intellectual property of others, the expectation that individual work will be submitted unless otherwise allowed by an instructor, and the obligations both to protect one’s own academic work from misuse by others as well as to avoid using another’s work as one’s own. All students are expected to understand and abide by these principles. Scampus, the Student Guidebook, contains the Student Conduct Code in Section 11.00, while the recommended sanctions are located in Appendix A: http://www.usc.edu/dept/publications/SCAMPUS/gov/. Students will be referred to the Office of Student Judicial Affairs and Community Standards for further review, should there be any suspicion of academic dishonesty. The Review process can be found at http://www.usc.edu/student-affairs/SJACS/.
For this class, you are encouraged to copy and modify code from online sources and from class demonstration projects. You are also welcome to work together. However, you must always label and provide attribution for work that is not your own, using a credits screen in your game or a credits.txt file delivered with your build.

You must provide attribution:

- if you use more than 3 lines of code from an external source without modifying it
- if you use any assets (images, textures, sounds, etc.) that are not your own work

You may use any code presented in class without attribution.

Failing to provide the proper attribution for code or assets is unethical and may be treated as plagiarism.

Support
A number of USC’s schools provide support for students who need help with scholarly writing. Check with your advisor or program staff to find out more. Students whose primary language is not English should check with the American Language Institute (ali.usc.edu), which sponsors courses and workshops specifically for international students. The Office of Disability Services and Programs (dsp.usc.edu) provides certification for students with disabilities and helps arrange the relevant accommodations.

The university provides extensive support for students facing everything from normal exam stress to insomnia to personal crises. Among the many services:

- The Wellness Lounge in room 203 of the Engemann Student Health Center offers not only drop-in consultation but fresh fruit, chocolate and massage chairs.

- The Office of Wellness Health and Promotion (owhp@usc.edu or 213-740-4777) runs daily Happy Hours featuring yoga, visiting therapy dogs, and more.

- Student Counseling Services (213-740-7711, 24 hours, or walk-in on the third floor of Engemann) offers an enormous array of resources, from one-time crisis support to weekly Stress Fitness workshops, for students facing all types of challenges.

Emergencies
If an officially declared emergency makes travel to campus infeasible, USC Emergency Information (emergency.usc.edu) will provide updates on safety and other issues, including ways in which instruction will be continued.
Syllabus Updates
This syllabus is liable to change up to the beginning of class and possibly over the semester. Please check the posted syllabus regularly, and note all changes that are shared by the instructor in class. You are responsible for keeping up with changes, even if you are absent from a class.

Instructor Bio
Margaret Moser is an Assistant Professor of Practice at the USC School of Cinematic Arts, where she teaches courses on game design, digital prototyping, innovative mobile experiences, and experimental interfaces. She holds an MFA in Design and Technology from Parsons.

Margaret’s work has been shown at Come Out & Play, Games4Change, and the Babycastles guerrilla game gallery in Brooklyn. She built web-based games at MTV Networks and has served as lead producer of two commercial iOS applications. She has spoken at AlterConf and IndieCade East, and served as co-curator of the Digital Selects exhibit at IndieCade 2015.
