SSCI 265Lg, The Water Planet

Units: 4

Term—Day—Time: Spring, 2016, Tuesdays and Thursdays 11:00 a.m.-12:20 p.m.

Location: Taper Hall, THH 102

Co-Instructor: Dr. John P. Wilson
Office: AHF B55F
Office Hours: Wednesdays and Fridays, 9:00-10:00 a.m., or by appointment
Contact Info: jpwilson@usc.edu, 213-740-1908

Co-Instructor: Dr. Elisabeth Sedano
Office: AHF B57C
Office Hours: Wednesdays and Thursdays, 1:00-2:00 p.m., or by appointment
Contact Info: sedano@usc.edu, 213-740-9582

Lab Instructor: TBD
Office: AHF B55
Office Hours: TBD
Contact Info: TBD

IT Help: Richard Tsung
Hours of Service: Monday to Friday, 9:00 a.m.-5:00 p.m.
Contact Info: ctsung@usc.edu, 213-821-4415
Course Description

This course entails a comprehensive investigation into the multi-faceted dimensions of water on Earth. Topics range from micro-scale concerns (e.g. water properties, form, and behavior) to regional-scale issues (e.g. water resource distribution, groundwater mining, and watershed dynamics) to global-scale processes such as the hydrologic cycle including atmospheric and oceanic circulation. Although there are many perspectives from which to approach the topic of water (e.g. economic, legal, political, institutional, and engineering perspectives), we will situate our investigation within a scientific framework with particular focus on scientific methodologies and the unique insights that science is able to reveal.

Attention will also be directed to the human (social science) dimensions of water supply and demand, and the implications for past and future societies. Water has specific societal significance because it is essential for sustaining life, directly and indirectly. Water is a necessary component of most agricultural and industrial processes, and it serves a central role in global and regional transportation networks. There are extensive technological dimensions to meeting the challenges of (in)adequate water supply that are critical to human existence. We will examine these aspects through a series of case studies that simultaneously explore the water footprint of modern consumer societies and how various cultures and countries have been shaped by three of the world’s largest and most iconic rivers: the Amazon, the Ganges, and the Yangtze.

This course satisfies the requirements for General Education Category E (Physical Sciences). Courses in this category are intended to bring to bear the perspectives of several scientific disciplines on a theme, illustrating the relevant scientific principles, their technological applications, and the societal significance and consequences. The GE designation further requires that the course content give students the opportunity to think critically through focused inquiry into a particular area of knowledge. Scientific methodologies, analytical techniques, and digital scholarship will be stressed.

The overall goal of the GE Program is to provide necessary context for an informed citizenry, and therefore these courses emphasize a broad sweep of knowledge and require active intellectual engagement with scientific principles. In practice, this means that students will be introduced to many concepts and terminologies that may be new and unfamiliar. The focus, nevertheless, will be on applying basic principles to specific problems rather than simple description, memorization, and recapitulation.

Learning Objectives

On completion of this course, students will be able to:

- Understand the special properties of water and the fundamental role it plays in the functioning of the Earth, with or without the presence or engagement of people.
- Understand the spatial and temporal character of water related processes and resources.
- Recognize the value of spatial knowledge, maps, and the spatial representation of water data.
- Understand the basic physical, environmental, and social aspects of the world’s water supply.
Prerequisite(s): None
Co-Requisite(s): None
Concurrent Enrollment: None
Recommended Preparation: None

Course Notes

In addition to the lectures, there are a series of laboratory experiences that are designed to introduce you to the tools of scientific inquiry and to give you practical experience in implementing these tools to explore various problems within the framework of the scientific method. These assignments are linked to the lectures and class discussions, but do not duplicate the lecture experience. You must register for one laboratory session in addition to registering for the class itself. Your weekly laboratory assignments will be graded and returned, and the final exam will include material from the class and laboratory component.

No make-up dates will be offered for missed quizzes or exams, so mark the appropriate dates on your calendars! If you have a legitimate conflict, speak with John Wilson or Elisabeth Sedano as soon as possible so we can make alternative arrangements.

Technological Proficiency and Hardware/Software Required

The mapping software and geospatial data required for course assignments will be accessed using computing resources provided by the Spatial Sciences Institute.

Required Readings

(Available for purchase in the USC bookstore)

(Available for purchase in the USC bookstore)

(Available for download as an e-book through USC libraries)

Description and Assessment of Assignments

Class Reports (8%): Two class reports are required for this class. Although topics vary each semester, reports typically ask students to conduct independent research and integrate course concepts into an essay. Each report contributes up to 4% towards a student’s final grade.

Weekly Quizzes (28%): Once a week, students will be quizzed on material from the previous week of class. These quizzes will be given either at the beginning or end of class. There are 14 total quizzes, and each quiz contributes up to 2% towards the student’s final grade.

Lab Assignments (14%): There are seven lab assignments in this class. Each lab assignment is completed in the weekly two-hour lab session. Students utilize their knowledge of water resources and geospatial mapping technologies to successfully complete each of these lab assignments.

Story Map Project (20%): As part of this class, students create a story map project in Labs 8 through 12. These lab sessions will combine individual as well as collaborative work and involve the creation and publication of a series of maps that will be used along with other
digital materials (charts, photographs, text, existing and possibly live-streamed sensor data, video clips, video streaming, etc.) to tell a water-related story. These stories will be presented in labs and the best stories will be published on the Spatial Sciences Institute website.

Final Examination (30%): The final exam in this class covers material from all parts of the class, including lecture, labs, and readings, spread across the entire semester. The date and time for this exam will be announced on Monday, 26th October, 2015.

Assignment Submission Policy

Assignments will be submitted for grading via Blackboard using the due dates specified in the Course Schedule below.

Additional Policies

Students are expected to attend and participate in every class session and to complete and upload all assignments before the deadlines detailed in the Course Schedule. No late work is accepted.

Course Schedule: A Weekly Breakdown

</tbody>
</table>
| Week 4 | 2/2 | 2/4 | **Storage | Groundwater**  
Discussion of the hydrologic processes associated with the storage and groundwater in specific kinds of landscapes | Davie, Ch. 4 | Weekly quiz in lecture  
Lab 2 is due to Blackboard by 11:55 p.m. the same day as your lab session |
|-------|-----|-----|-----------------|--------------|---------------------------------------------------------------|
| Week 5 | 2/9 | 2/11 | **Runoff | Rivers & Streamflow**  
Discussion of hydrologic principles behind runoff, rivers and related fluvial processes | Davie, Ch. 5 | Weekly quiz in lecture  
Lab 3 is due to Blackboard by 11:55 p.m. the same day as your lab session |
|       |     |     | **Rivers, Sediment Production & Transport | Amazon**  
Discussion of the hydrologic principles underlying streamflow analysis and modeling, and an introduction to the Amazon River in Brazil | Davie, Ch. 6 | Weekly quiz in lecture  
Lab 4 is due to Blackboard by 11:55 p.m. the same day as your lab session |
| Week 7 | 2/23 | 2/25 | **Rivers, Floods & Floodplains | Yangtze**  
Discussion of the role of floods and floodplains in hydrologic systems and an introduction to the Yangtze River in China | No reading | Weekly quiz in lecture  
Lab 5 is due to Blackboard by 11:55 p.m. the same day as your lab session |
|       | 3/1 | 3/3 | **Atmospheric Circulation | Oceanic Circulation**  
The role of atmospheric and oceanic circulation in the functioning of the Earth | No reading | Weekly quiz in lecture  
Lab 6 is due to 11:55 p.m. the same day as your lab session |
| Week 8 | 3/8 | 3/10 | **Water Quality | Ganges**  
Discussion of the role and importance of water quality and the likely sources of contaminants, plus an introduction to the Ganges River in India | Davie, Ch. 7 | Weekly quiz in lecture  
Lab 7 is due to Blackboard by midnight the same day as your lab session  
Report #1 is due to Blackboard by 11:55 p.m. on 3/11 |
|       | 3/22 | 3/24 | **Development, Urbanization, & Modernization | Los Angeles**  
Discussion of the role of development, urbanization and modernization in shaping human use of water resources; plus the history of water in Los Angeles | Jones, Ch. 1-2 | Weekly quiz in lecture  
Lab 8 is due to Blackboard by 11:55 p.m. the same day as your lab session |

Statement on Academic Conduct and Support Systems

Academic Conduct
Plagiarism – presenting someone else’s ideas as your own, either verbatim or recast in your own words – is a serious academic offense with serious consequences. Please familiarize yourself with the discussion of plagiarism in SCampus in Section 11, Behavior Violating University Standards and Appropriate Sanctions https://studentaffairs.usc.edu/scampus/. Other forms of academic dishonesty are equally unacceptable. See additional information in SCampus and university policies on scientific misconduct, http://policy.usc.edu/scientific-misconduct.

Discrimination, sexual assault, and harassment are not tolerated by the university. You are encouraged to report any incidents to the Office of Equity and Diversity http://equity.usc.edu or to the Department of Public Safety http://dps.usc.edu/contact/report/ . This is important for the safety of the whole USC community. Another member of the university community – such as a friend, classmate, advisor, or faculty member – can help initiate the report, or can initiate the report on behalf of another person. The Center for Women and Men http://engemannshc.usc.edu/cwm/ provides 24/7 confidential support, and the sexual assault resource center webpage http://sarc.usc.edu describes reporting options and other resources.

Support Systems
A number of USC’s schools provide support for students who need help with scholarly writing. Check with your advisor or program staff to find out more. Students whose primary language is not English should check with the USC American Language Institute http://ali.usc.edu/, which sponsors courses and workshops specifically for international graduate students. The Office of Disability Services and Programs http://dsp.usc.edu/ provides certification for students with disabilities and helps arrange the relevant accommodations. If an officially declared emergency makes travel to campus infeasible, USC Emergency Information http://emergency.usc.edu will provide safety and other updates, including ways in which instruction will be continued by means of blackboard, teleconferencing, and other technology.
