General Information

Where/When  Class meets Mon/Wed/Fri, 10:00–10:50am in SAL101.
Lab section meets in ZHS B56. Remember to register separately for lab and class!

Instructors

Professor: Julien Emile-Geay  ZHS 275  julieneg@usc.edu
Teaching Assistants: TBD  TBD  TBD

Office Hours  MWF 11-12 in ZHS 275, or by appointment.

Overview

Synopsis  This general education undergraduate course will introduce you to the fundamentals of natural and anthropogenic climate change. After briefly recalling the formation of the solar system, our planet and its fluid envelopes, we will introduce the basic physics of the climate system, providing tools to understand weather and climate phenomena (e.g. monsoons, El Niño), the greenhouse effect, and climate feedbacks. Building on this understanding, a succinct tour of geologic history will help us paint a more complete picture of Earth’s climate variations and how they affected human evolution and history. With this context, we will be able to judge the anomalous character of recent climate change, establish its anthropogenic nature, and discuss solutions to the current climate crisis.

Grade

Midterm 1  17%
Midterm 2  16%
Final  17%
Lab  30%
Online Discussions  10%
In-class participation (Top Hat)  10%

The class is worth 4 units, which means that it requires substantial work. Lab attendance is mandatory (as in: not optional) every week. Exams are all multiple choice questions. The final (2h) is cumulative. Exam grades are curved so that the best score gets 100; everyone else is graded down from there. So if the test was hard and the best grade was 91, everyone else’s grade gets shifted upward by approximately 9 points. Further adjustments are non-negotiable. Haggling would only have negative impacts on your grade. Of course, you are far too smart to resort to such vile tactics anyway. I’m just saying. The only way to boost your grade is using JEP worth up to 1/3 of a grade (e.g. from B+ to A-). Sign in early or forever hold your peace.

**Rules**

There aren’t many rules, but they’re all important. First, read the syllabus (i you’ve gotten this far, you’re on the right track). Second, check BlackBoard. Third, ask questions when you don’t understand things; chances are you’re not alone. Fourth, don’t miss class or lab. Fifth, don’t email the instructor with questions whose answer is in the syllabus. Sixth, under no circumstance should you ever even think of haggling for your grade. Seven, read the syllabus. Just in case.

**Exams**

Let’s face it, exams are a huge pain for everyone involved (if you think it’s annoying to answer an exam, try grading 180 of them). So we try to make exams a learning experience. First you will sit the exam the exam as a group and wrestle with hard problems for 1h, so hopefully these questions stick with you and won’t be just a rote memorization exercise (that has never made anyone smart). A few days later, you will sit the same exam again, closed book. Since you will have had a chance to think about the problems and review the relevant material, you should do great.

**Reading**

**Main book (optional)**

**Weekly readings**

Will be either taken from the book or posted on BlackBoard.

**Relevant Books**

- Weart, S., *The Discovery of Global Warming*, URL.
- Emanuel, K., *What we know about climate change*, URL.
- Diamond, J., *Collapse: How Societies Choose to Fail or Succeed*, URL.
Schedule

I Physics of Climate

The first section of the class focuses on the climate system, what it is and how it works.

**Week 1 — 01/09/17 — Overview**
- **Monday:** The climate change roadmap
- **Wednesday:** In the beginning... Earth’s formation
- **Friday:** The Climate system – an overview

*Suggested reading:* Dessler, Chapter 1

**Week 2 — 01/16/17 — Energy & Radiation**
- **Monday:** no class in observance of Dr Martin Luther King Jr day
- **Wednesday:** Energy types & conversions
- **Friday:** Radiation, heat and temperature

*Suggested reading:* Dessler, Chapter 2 & 3.

**Week 3 — 01/23/17 — Planetary Energy Balance**
- **Monday:** The greenhouse effect
- **Wednesday:** Insolation and the seasons
- **Friday:** Water in the atmosphere
  - Lab #1: Energy Balance

*Suggested reading:* Dessler, Chapter 4. Discussion #1 due

**Week 4 — 01/30/17 — Atmospheric Motion**
- **Monday:** The General Atmospheric Circulation
- **Wednesday:** The Physics of Rain
- **Friday:** Tropical Cyclones: Hurricanes and Typhoons.
  - Lab #2: Greenhouse Gases

*Suggested reading:* Dessler, Chapter 6.

**Week 5 — 02/06/17 — Oceanic Motion**
- **Monday:** Earth’s Oceans
- **Wednesday:** Ocean Circulation and climate
- **Friday:** The Carbon Cycle
  - Lab #3: Atmospheric Circulation
II History of Climate
The section focuses on how the climate system has behaved over the course of Earth’s history. This history is rich in lessons about climate’s future, and our own.

Week 8 — 02/27/17— Ice Ages
Monday: Paleoclimatology: the science of Past Climates
Wednesday: Pleistocene Ice Ages: observations
Friday: Pleistocene Ice Ages: astronomical theory
Lab #6: El Niño-Southern Oscillation.
Suggested reading: Dessler, Chapter 5.

Week 9 — 03/06/17— Humans & Climate Change
Monday: Abrupt climate change
Wednesday: Societal collapse and climate change
Friday: The Hockey Stick Controversy
Lab #7: The astronomical theory of Ice Ages
Suggested reading: Dessler, Chapter 2. E.Kolbert, the climate of man, part 2. Discussion #3 due
SPRING RECESS : March 12 – 19

III CLIMATE IN THE AGE OF MAN

Week 10 — 03/20/17— Climate Models

Monday: The Anthropocene

Wednesday: Climate Modeling I. Early pioneers

Friday: Climate Modeling II : Global Climate Models

Lab #8: The Temperature Record

Suggested reading: Schmidt: the physics that we know. Dessler, Chapter 8

Week 11 — 03/27/17—Midterm 2

Monday: Detection and Attribution of climate change

Wednesday: Midterm 2 (groups)

Friday: Midterm 2 (individual)

Lab #9: The Carbon Cycle, Part 1

Suggested reading: Kerry Emanuel: Phaeton’s Reins. Discussion #4 due

Week 12 — 04/03/17— Climate Denial

Monday: Merchants of Doubt

Wednesday: Climate change and the media

Friday: Climate Fallacies

Lab #10: The Carbon Cycle, Part 2

Suggested reading:

Week 13 — 04/10/17— Climate Futures

Monday: The Greenhouse Future

Wednesday: Climate Impacts

Friday: Guest lecture

Lab #11: How to talk to a climate contrarian

Suggested reading: Dessler, Chapter 10, 11, 12. Discussion #5 due
Week 14 — 04/17/17— Climate Decisions

Monday: Climate Options
Wednesday: The Economics of Climate Change
Friday: Geoengineering
Suggested reading: Dessler, Chapter 9, 13.

Week 15 — 04/24/17— Climate & You

Monday: Collective action: Climate Policy
Wednesday: Individual action
Friday: Final (groups)
Suggested reading: Dessler, Chapter 14. Discussion #6 due

Monday May 8—Final Exam – 8-10am

IV Participation

Class participation is a critical aspect of this course. It takes place in two main avenues: in the classroom and on BlackBoard.

In-class participation
The first way to participate in class is to come to class. I somehow make it to class every day – it requires no superhuman powers. However, just parking in the classroom and checking Facebook or Reddit is a waste of your time and your parents’ money, so active participation is what we’re after: ask questions. Offer comments. You’re not required to know much science to take this class, so there is no such thing as a stupid question; also, we will encounter many controversial topics, in which your opinion matters – it would be too bad to keep it for yourself. However, with 180 students in the room, we understand that it can be daunting to raise your hand and speak your mind. So another way to participate is via in-class polls. Every class, I will ask you to answer some questions via a polling software called Top Hat (see corresponding section). Many polls will be informal, only aimed at getting your personal opinion on a climate-related question; those will be anonymous. Other questions will not be. Please do not freak out if you get questions wrong; you will not be graded based on correctness to these questions; only participation. In addition, Top Hat will be the platform of choice for in-class discussions. Again, those discussions will be aimed to elicit your participation, but there will be no right or wrong answer to these.

Together, in-class participation represents 10% of the final grade (more than half a midterm). That is no small potatoes. Treat it seriously.
**BlackBoard Discussions**

Another way to participate is via BlackBoard discussions. As the semester progresses, we will post Discussion boards related to assigned readings, within a specified time frame. Your participation will be judged by your peers and your TAs. You have the ability to rate your peers’ posts, and we hope you will do so constructively.

Again, as should be obvious, the online world is but an extension of the physical world: only speak in ways you would like to be spoken to, stand up for your peers, and report abuse when you see it. If you want to get more involved, you can earn extra credit for moderating forums. Discussions may be accessed via the Assignments tab, or via Tools>Discussions.

**V Technology**

**Blackboard**

BlackBoard is our primary medium of communication outside the classroom. It is where I post class notes, announcements, and assignments. Is is where you access that content, participate in discussions, and check your grades. **It is your responsibility to ensure that you receive BlackBoard announcements.** Make sure you enable email notifications, and importantly, make sure your inbox is not full; every year I get emails bounced from students too neglectful to clean up their inbox. If you have a doubt about when an assignment is due, go check it on BlackBoard. Also note that BlackBoard messages are richer than the email notifications they generate. Frequently, the announcements I’ll send will have links to content archived on BlackBoard – those links will not appear in the emails. If the email digest you read does not make sense, please check it on BlackBoard; it might have the answer you need over there. If it still doesn’t, please email me.

**Top Hat**

The tool we will use to gather live, in-class feedback is called Top Hat. You may submit your responses in one of three ways: Text messages, a Smartphone App, or a Web browser. In case you have not received an invitation to join the course on Top Hat, here’s how to get started.

The economics are as follows: $20 for a semester-long license or $38 for a 5-year license (unlimited number of classes). **Purchase of a license is required to get in-class discussion points (10% of the grade).** The course code is NNNNNN.

**Email**

Email is a relatively new advent in the world of education. It allows an unparalleled level of access to professors, which has both pros and cons. In some cases you will spot a mistake of mine in an assignment or a grade, and pointing it out will save everyone a lot of time. In many cases, however, emails unnecessary clog my inbox. Here are some rules to use email wisely:

- Check BlackBoard before you type. Chances are the answer to your question is already there.
- Direct all lab-related queries to your TA.
- Direct all Top Hat issues to support@tophat.com, unless they tell you to contact me.
- Don’t expect an immediate answer. I have a life too, so it could be some time before I get around to answering your query. Chances are, I’m not reading my email at 4am.
- Write exactly as if you were speaking to me in person. Not more, not less formally.
- The correct way to address a professor is “Professor”

Emails that break any one of these rules will not receive an answer. If you can spare the time, please come to office hours or see me after class. I’d much rather talk to a human than a computer, and I have yet to bite a student. Other email etiquette tips may be found [here](#).
Laptops & Tablets
Laptops and tablets look way cool, but they have proven far less effective than good old pen & paper at information retention. Moreover, their use in the classroom can be disruptive to you and (more importantly) people around you if you use them for activities unrelated to the class. Please exercise best judgment and be considerate of others around you.

VI Academic Conduct
Most likely you are a responsible adult, so the comments below don't apply to you. However, for the small minority of childish students who sign up every year, here are a few admonitions for good measure.

Responsibility
You’re now a grown up. Act like one. If you fail to show up for no good reason, own it.

Plagiarism
Presenting someone else’s ideas as your own, either verbatim or recast in your own words, is a serious academic offense with serious consequences. Please familiarize yourself with the discussion of plagiarism in SCampus in Section 11, Behavior Violating University Standards. Other forms of academic dishonesty are equally unacceptable. See additional information in SCampus and university policies on scientific misconduct.

Discrimination
Discrimination, sexual assault, and harassment are not tolerated by the university. You are encouraged to report any incidents to the Office of Equity and Diversity or to the Department of Public Safety. This is important for the safety whole USC community. Another member of the university community – such as a friend, classmate, advisor, or faculty member – can help initiate the report, or can initiate the report on behalf of another person. The Center for Women and Men provides 24/7 confidential support, and the sexual assault resource center webpage describes reporting options and other resources.

Support Systems
A number of USC’s schools provide support for students who need help with scholarly writing. Check with your advisor or program staff to find out more. Students whose primary language is not English should check with the American Language Institute, which sponsors courses and workshops specifically for international graduate students. The Office of Disability Services and Programs for students with disabilities and helps arrange the relevant accommodations. If an officially declared emergency makes travel to campus infeasible, USC Emergency Information will provide safety and other updates, including ways in which instruction will be continued by means of blackboard, teleconferencing, and other technology.
Cheating
We are aware that some former test results are available on the web. Use them at your own risk...

GradeBuddy
The following is a reminder from Academic Policies memo 11/25:
Any student selling or distributing notes taken in a classroom is in violation of the University’s Academic Integrity policy and is subject to university sanctions. This policy is clearly stated in Section 11.12 of the student handbook, SCampus, which identifies the following as violations of community standards:

- Acquisition of term papers or other assignments from any source and the subsequent presentation of those materials as the student’s own work, or providing term papers or assignments that another student submits as his/her own work.

- Distribution or use of notes or recordings based on university classes or lectures without the express permission of the instructor for purposes other than individual or group study. This includes, but is not limited to, providing materials for distribution by services publishing class notes. This restriction on unauthorized use also applies to all information which had been distributed to students or in any way had been displayed for use in relationship to the class, whether obtained in class, via email, on the Internet or via any other media. (See Section C.1 Class Notes Policy.)

- Recording a university class without the express permission of the instructor and announcement to the class. Recording can inhibit future free discussion and thus infringe on the academic freedom of other students as well as the instructor.
