Introduction
This course introduces the student to the biomedical community as it relates to current strategies undertaken to move research discoveries from the laboratory (bench) into clinical practice (bedside) to diagnose and treat patients. This concept is commonly referred to as Translational Science or Translational Medicine. The tenets of this course will be defined and explained in terms of promoting focused multidisciplinary interactions between science and medicine to enhance disease research and drug development. In addition, the wider inter-relationships with regulatory, ethical and societal sectors will be presented.

Objectives
This course is designed for undergraduates of both scientific and non-scientific majors with an interest in learning about principles and concepts underlying drug discovery and development of medicines. Chapters from the required textbook will be supplemented with a variety of source materials including articles from scientific journals and public websites. Selected cases studies will be critically reviewed and emerging “hot” topics discussed.

Upon successful completion of this course, the student should be able to demonstrate a working knowledge of:

- The importance of a team effort in the drug discovery/drug development process as seen through the eyes of the pharmaceutical industry.
- The many challenges faced by a start-up pharmaceutical company.
- The importance of intellectual property (IP); critical IP issues and timing.
- The preclinical drug development process from therapeutic target to marketable drug.
- The basic terminology used in characterizing a new drug (e.g. potency, EC$_{50}$, IC$_{50}$, MTD, efficacy, selectivity, ADME, etc…).
- The importance of properly designing a scientific experiment (Scientific Method).
- The importance of identifying potential genotoxicity, carcinogenicity and reproductive/developmental toxicology issues during the course of a drug discovery campaign and how to test for them.
• The difference between a small molecule drug and a biopharmaceutical and understand the advantages and disadvantages of each therapy.
• The importance of good laboratory practices (GLP), good manufacturing practices (GMP) and good clinical practices (GCP).
• The role of clinical trials in drug development.
• Why so many experimental compounds fail to ever reach the market.

Assignments and Grading:

Class participation: 15 pts (6%)
6 quizzes @ 10 pts each 60 pts (24%)
2 midterm exams @ 50 pts each: 100 pts (40%)
1 final exam (partially cumulative): 75 pts (30%)
Total: 250 pts.

Class Participation and Attendance (15 pts): On a scale of 15, 0-indicating no participation, 15-indicating best participation. You can therefore increase the probability of getting a higher mark by being proactive in terms of asking (relevant) questions in class and/or contributing to discussions.

Attendance at all classes is expected. Participation will include asking and answering questions and being actively involved in the discussion. It is expected that the students read the assigned papers prior to the lecture and be prepared to discuss background, current understanding, treatments, and gaps in knowledge for the topic in each lecture.

There will be 6 quizzes over the course of the semester that will primarily be based on questions pulled from the text book. The midterms (50 points each) will include multiple choice questions T/F questions fill-in the blank questions (all 2 points each), and 1 short essay (10 points).

Instead of a final exam, a 8-page double-spaced essay (deliverable) will be due by email to ddavies@usc.edu by 5pm on May 9. The deliverable will discuss either: 1) The advantages (and challeges) of being "First in Class.”

Be sure to identify examples and discuss their histories and why you think these molecules were developed. Also, be sure to include unsuccessful examples or examples that may have been dropped from a companies agenda and why were these molecules dropped.

Or discuss 2) The advantages (and challeges) of being "Best in Class."

Be sure to identify examples and discuss their histories and why you think these molecules were developed. Also be sure to include unsuccessful examples or examples that may have been dropped from a companies agenda and why were these molecules dropped.

Proper references to the literature (this excludes Wikipedia and the like) are required and included in the 8 pages.
Notes, books, calculators, electronic dictionaries, regular dictionaries, cell phones or any other aids are not allowed during exams.

Students will be asked to complete an anonymous critical evaluation of the course at its completion.

Course Readings

Required Readings

Drug Discovery and Development: Technology in Transition, 2nd Edition

Although not mandatory, it is strongly suggested that the students purchase the textbook for this course as it will greatly improve the students grasp on the Drug Discovery/Development process. The students will be able to use identified chapters in the text to support their learning process throughout the semester.

Other course materials including but not limited to the syllabus, supplemental reading assignments and additional handouts will be posted on http://blackboard.usc.edu/. The students will also be encouraged to use the online discussions among students via Blackboard.

Course Outline

This course will be in the format of a directed seminar/lecture under the guidance of the instructor for the specific session. During each weekly session the instructor will engage the students with questions and
draw comments or interpretations primarily based on the assigned reading. Students are expected to ask questions and participate in an interactive fashion.

Statement on Academic Conduct and Support Systems

**Academic Conduct**

Plagiarism – presenting someone else’s ideas as your own, either verbatim or recast in your own words – is a serious academic offense with serious consequences. Please familiarize yourself with the discussion of plagiarism in *SCampus* in Section 11, *Behavior Violating University Standards* [https://scampus.usc.edu/1100-behavior-violating-university-standards-and-appropriate-sanctions](https://scampus.usc.edu/1100-behavior-violating-university-standards-and-appropriate-sanctions). Other forms of academic dishonesty are equally unacceptable. See additional information in *SCampus* and university policies on scientific misconduct, [http://policy.usc.edu/scientific-misconduct](http://policy.usc.edu/scientific-misconduct).

Discrimination, sexual assault, and harassment are not tolerated by the university. You are encouraged to report any incidents to the *Office of Equity and Diversity* [http://equity.usc.edu](http://equity.usc.edu) or to the *Department of Public Safety* [http://capsnet.usc.edu/department/department-public-safety/online-forms/contact-us](http://capsnet.usc.edu/department/department-public-safety/online-forms/contact-us). This is important for the safety of the whole USC community. Another member of the university community – such as a friend, classmate, advisor, or faculty member – can help initiate the report, or can initiate the report on behalf of another person. The *Center for Women and Men* [http://www.usc.edu/student-affairs/cwm/](http://www.usc.edu/student-affairs/cwm/) provides 24/7 confidential support, and the sexual assault resource center webpage [http://sarc.usc.edu](http://sarc.usc.edu) describes reporting options and other resources.

**Support Systems**

A number of USC’s schools provide support for students who need help with scholarly writing. Check with your advisor or program staff to find out more. Students whose primary language is not English should check with the *American Language Institute* [http://dornsife.usc.edu/ali](http://dornsife.usc.edu/ali), which sponsors courses and workshops specifically for international graduate students. The *Office of Disability Services and Programs* [http://sait.usc.edu/academicsupport/centerprograms/dsp/home_index.html](http://sait.usc.edu/academicsupport/centerprograms/dsp/home_index.html) provides certification for students with disabilities and helps arrange the relevant accommodations. If an officially declared emergency makes travel to campus infeasible, *USC Emergency Information* [http://emergency.usc.edu](http://emergency.usc.edu) will provide safety and other updates, including ways in which instruction will be continued by means of blackboard, teleconferencing, and other technology.
Emergency Preparedness/Course Continuity:
In case of emergency, and travel to campus is difficult, USC executive leadership will announce an electronic way for instructors to teach students in their residence halls or homes using a combination of Blackboard, teleconferencing, and other technologies. Instructors should be prepared to assign students a "Plan B" project that can be completed at a distance. For additional information about maintaining your classes in an emergency please access: http://cst.usc.edu/services/emergencyprep.html
