

INF 549: Introduction to Computational Thinking and Data Science

**USC Viterbi School
of Engineering**

Units: 4

Term—Day—Time:

Spring 2016 – Tues-Thur 11am-12:30pm

Location: Social Sciences Building (SOS) B41

Instructor: Dr. Yolanda Gil

Office: GER 207

Office Hours: Immediately after class

Contact Info: gil@isi.edu, 310-822-1511

Catalogue Course Description

Introduction to data analysis techniques and associated computing concepts for non-programmers. Topics include foundations for data analysis, visualization, parallel processing, metadata, provenance, and data stewardship.

Expanded Course Description

This course will teach non-programmers to think in computing terms about modern topics, and to approach real-world phenomena through data science. The course will enable students to:

- Acquire computational thinking skills that will enable students to represent and reason about complex problems in the digital arena
- Understand different kinds of data in terms of their possibilities and limitations to approach complex problems cast in terms of the emerging field of data science
- Become data science scholars through best practices in data documentation and dissemination

The course is intended for students in disciplines outside of computer science, so no prior experience with computer science is assumed. The course topics will be particularly relevant to students interested in physical sciences and social sciences.

This class will include eight homework assignments and a final.

Learning Objectives

This course teaches non-programmers to think in computing terms about modern topics, and to approach real-world phenomena through data science. The course introduces different kinds of data and corresponding approaches to data analysis, including geospatial data, time series, networks, and multimedia data. Students learn to run multi-step analysis through a graphical workflow interface, and will experience first hand complex concepts in data science such as parallel computing, provenance, and visualization. Students also learn to use ontologies and logic representations to capture metadata and other knowledge about complex data. The course includes practical lessons to use workflow and ontology development toolkits, as well as best practices for data stewardship and dissemination.

Prerequisite(s): none

Co-Requisite (s): none

Recommended Preparation: Mathematics and logic undergraduate courses.

Methods of Teaching:

Topics and materials will be introduced through practical data analysis examples. In the first homework, each student will choose a dataset based on their interests (social media dataset, geospatial dataset, health dataset, etc). Subsequent homeworks will be devoted to exercise on that dataset what has been learned in class. All of the course materials, including the readings, videos, slides, and homeworks will be posted online.

Technological Proficiency and Hardware/Software Required

Students are required for the homework assignments to access Web sites to download, process, and deposit data. Students who have basic programming skills (whether Python, MatLab, or other languages) will be able to use more advanced techniques in their homeworks if they desire.

Required Readings and Supplementary Materials

There is no textbook. Handouts of all required readings will be made freely available to students electronically. All required software is freely available for students to install on their personal computers or to access through a web interface.

The main reference for the class is this book (freely available online), where selected chapters will be covered:

- "The Fourth Paradigm: Data-Intensive Scientific Discovery" T. Hey, S. Tansley, and K. Tolle(Eds), Microsoft Research, 2009. Available free online at <http://research.microsoft.com/en-us/collaboration/fourthparadigm/>.

Representative course readings that will be used in addition (all will be made freely available to students) include:

- "Computational Thinking." J. M. Wing. Communications of the ACM, viewpoint, vol. 49, no.3, March 2006.
- "Data Science in the News: Advances and Challenges for the Era of Big Data." Kate Musen, Alyssa Deng, Taylor Alarcon, Yolanda Gil. Technical Report ISI-TR-702, Information Sciences Institute, University of Southern California. August 24, 2015.
- "Ten Simple Rules for the Care and Feeding of Scientific Data." Goodman, A.; Pepe, A.; Blocker, A. W.; Borgman, C. L.; Cranmer, K.; Crosas, M.; Stefano, R. D.; Gil, Y.; Groth, P.; Hedstrom, M.; Hogg, D. W.; Kashyap, V.; Mahabal, A.; Siemiginowska, A.; and Slavkovic, A. PLOS Computational Biology, 10, 2014.

Description and Assessment of Assignments

There will be a homework assignment every 4 lectures. The assignments must be submitted individually and students will receive individual scores. Students may work in groups to complete the tasks. The homework assignments are expected to take 6-8 hours. Each assignment is graded on a scale of 0-100 and the grading criteria will be specified in each assignment. The homework topics are listed in the Course Schedule.

Grading Breakdown

Quizzes: There will be weekly quizzes based on the material from the week before. There is no mid-term for this class.

Homework: There will be eight homework assignments throughout the course.

Final Exam: There is a final exam at the end of the semester covering all of the material covered in the class.

Grading Schema:

Quizzes	20%
Homework assignments	50%
Class participation	10%
Final:	20%
<hr/>	
Total	100%

Grades will range from A through F. The following is the breakdown for grading:

94 - 100 = A	74 - 76 = C
90 - 93 = A-	70 - 73 = C-
87 - 89 = B+	67 - 69 = D+
84 - 86 = B	64 - 66 = D
83 - 83 = B-	60 - 63 = D-
77 - 79 = C+	Below 60 is an F

Assignment Submission Policy

Homework assignments are due at 11:59pm on the due date and should be submitted in Blackboard.

Homework will be accepted up to one week late as long as the student requested a late submission ahead

of the deadline, and in that case the assignment will be graded at 20% less than the possible points for the assignment. After one week, the assignment will not be graded.

Syllabus and Class Schedule

	Date	Topic	Material Covered	Homework assigned
Section I: Introduction to Computational Thinking and Data Science				
1	1/12	Computational thinking and data science	<ul style="list-style-type: none"> • What is computational thinking • Computational thinking for reasoning and analysis • What is data science • Data scientists • The context of data science 	
2	1/14	Data	<ul style="list-style-type: none"> • What is data • What is not (yet) data • Time series data • Networked data • Geospatial data • Text data • Labeled and annotated data • Big data 	Homework HW1: Formulating questions about data (due 1/26)
3	1/19	Data analysis software	<ul style="list-style-type: none"> • Programs for data analysis • Inputs and Outputs • Program Parameters • Programming Languages • Programs as Black Boxes • Algorithms versus software 	
4	1/21	Multi-step data analysis as workflows	<ul style="list-style-type: none"> • Building workflows by composing software • Pre-processing and post-processing data • Workflows for data analysis • Workflow inputs and parameters • Executing workflows • Exploring data through workflows • Workflows in practice 	
5	1/26	Workflow practicum	<ul style="list-style-type: none"> • The WINGS workflow system • Workflows in practice 	Homework HW2: Exploring data analysis workflows (due 2/4)

Section II: Data Analysis				
6	1/28	Data analysis tasks (I)	<ul style="list-style-type: none"> Data analysis tasks in data mining, statistics, and machine learning Classification 	
7	2/2	Data analysis tasks (II)	<ul style="list-style-type: none"> Clustering 	
8	2/4	Data analysis tasks (III)	<ul style="list-style-type: none"> Pattern detection Anomaly detection Simulation and prediction 	Homework HW3: Analyzing data with workflows (due 2/16)
9	2/9	Data pre-processing	<ul style="list-style-type: none"> Data cleaning Quality control Data integration Feature selection Feature construction 	
10	2/11	Data lifecycle	<ul style="list-style-type: none"> Data collection Data storage Data extraction and querying Data integration Data presentation 	
11	2/16	Data visualization	<ul style="list-style-type: none"> Types of visualizations Time series visualizations Geospatial visualizations Multi-dimensional spaces 	Homework HW4: Data visualization (due 2/25)
Section III: Data Analysis in Practice				
12	2/18	Analyzing different kinds of data (I)	<ul style="list-style-type: none"> Analyzing text 	
13	2/23	Analyzing different kinds of data (II)	<ul style="list-style-type: none"> Analyzing time series data 	
14	2/25	Analyzing different kinds of data (III)	<ul style="list-style-type: none"> Analyzing network data 	Homework HW5: Data analysis in scientific articles (due 3/8)
15	3/1	Analyzing different kinds of data (IV)	<ul style="list-style-type: none"> Analyzing multimedia data Analyzing geospatial data 	
16	3/3	Parallel and distributed computing for big data (I)	<ul style="list-style-type: none"> Cost of computation Divide and conquer Parallel computing 	
17	3/8	Parallel and	<ul style="list-style-type: none"> Multi-core computing 	Homework HW6:

		distributed computing for big data (II)	<ul style="list-style-type: none"> • Distributed computing • Cluster computers • Cloud computing • Grid computing • Virtual machines • Web services • Speedup with parallel computing • Dependencies and message passing • Limits of speedup: Critical path • Amdahl's law • Embarrassingly parallel computations • When problems are not parallelizable • Execution failures • Reduction through MapReduce/Hadoop 	Data analysis with parallel processing (due 3/29)
Section IV: Metadata				
18	3/10	Semantic metadata	<ul style="list-style-type: none"> • What is metadata • Basic metadata versus semantic metadata • Metadata about data collection • Metadata about data processing • Metadata for search and retrieval • Metadata standards • Domain metadata and ontologies 	
19	3/22	Ontologies (I)	<ul style="list-style-type: none"> • What is an ontology • Taxonomies and class inheritance • Properties • Logical constraints 	
20	3/24	Ontologies (II)	<ul style="list-style-type: none"> • Logical reasoning and inference • Expressivity and computation • The Semantic Web 	
21	3/29	Ontologies (III)	<ul style="list-style-type: none"> • Practicum: the PROTÉGÉ ontology editor 	Homework HW7: Developing ontologies (due 4/7)
22	3/31	Provenance	<ul style="list-style-type: none"> • What is provenance • Provenance concerning objects • Provenance concerning people and institutions • Provenance concerning processes 	

			<ul style="list-style-type: none"> • Provenance models • Provenance standards 	
Section V: Data Dissemination				
23	4/5	Data formats and standards	<ul style="list-style-type: none"> • Data formats • Data standards • Data repositories • Data services • The Semantic Web and linked open data 	
24	4/7	Tracking metadata and provenance	<ul style="list-style-type: none"> • Combining computation with metadata and provenance • Validating a data analysis method • Tracking provenance during data analysis • Automatically generating metadata for data analysis 	Homework HW8: Describing provenance for data (due 4/19)
25	4/12	Data stewardship	<ul style="list-style-type: none"> • Data sharing • Data identifiers • Licenses for data • Data citation and attribution • Software and other work products 	
Section VI: Advanced Topics				
26	4/14	Advanced topics (I)	<ul style="list-style-type: none"> • Privacy and ethics in data science 	
27	4/19	Advanced topics (II)	<ul style="list-style-type: none"> • Introduction to databases 	
28	4/21	Advanced topics (III)	<ul style="list-style-type: none"> • Crowdsourcing data collection 	
29	4/26	Advanced topics (IV)	<ul style="list-style-type: none"> • Multidisciplinary collaborations 	
30	4/28	Advanced topics (V)	<ul style="list-style-type: none"> • Introduction to natural language processing and grammars 	
	TBD	Final Exam – (May 4-11)		

Statement on Academic Conduct and Support Systems

Academic Conduct

Plagiarism – presenting someone else’s ideas as your own, either verbatim or recast in your own words – is a serious academic offense with serious consequences. Please familiarize yourself with

the discussion of plagiarism in *SCampus* in Section 11, *Behavior Violating University Standards* <https://scampus.usc.edu/1100-behavior-violating-university-standards-and-appropriate-sanctions>. Other forms of academic dishonesty are equally unacceptable. See additional information in *SCampus* and university policies on scientific misconduct, <http://policy.usc.edu/scientific-misconduct>.

Discrimination, sexual assault, and harassment are not tolerated by the university. You are encouraged to report any incidents to the *Office of Equity and Diversity* <http://equity.usc.edu> or to the *Department of Public Safety* <http://capsnet.usc.edu/department/department-public-safety/online-forms/contact-us>. This is important for the safety of the whole USC community. Another member of the university community – such as a friend, classmate, advisor, or faculty member – can help initiate the report, or can initiate the report on behalf of another person. *The Center for Women and Men* <http://www.usc.edu/student-affairs/cwm/> provides 24/7 confidential support, and the sexual assault resource center webpage <http://sarc.usc.edu> describes reporting options and other resources.

Support Systems

A number of USC's schools provide support for students who need help with scholarly writing. Check with your advisor or program staff to find out more. Students whose primary language is not English should check with the *American Language Institute* <http://dornsife.usc.edu/ali>, which sponsors courses and workshops specifically for international graduate students. *The Office of Disability Services and Programs* http://sait.usc.edu/academicsupport/centerprograms/dsp/home_index.html provides certification for students with disabilities and helps arrange the relevant accommodations. If an officially declared emergency makes travel to campus infeasible, *USC Emergency Information* <http://emergency.usc.edu> will provide safety and other updates, including ways in which instruction will be continued by means of blackboard, teleconferencing, and other technology.
