

SPACECRAFT STRUCTURAL STRENGTH AND MATERIALS
ASTE 557
FALL 2017 SYLLABUS

Course Instructor: R. Brett Williams, PhD, PE
Author Affiliation: Manager – Optics & Lasers Department, Raytheon Space & Airborne Systems
E-Mail: rbwillia@usc.edu
Phone: 310-270-5269 (mobile)

COURSE SCOPE AND OBJECTIVES:

This course is geared towards graduate-level engineers with diverse technical backgrounds who are working professionals in the aerospace industry and desire a course focused on the structural strength design and materials selection aspects of spacecraft development. Upon completion of the course, students will be able to understand the scope of work being performed by mechanical/structural teams and be able to interact with them in a more productive and knowledgeable manner. Lectures focus on general concepts applicable to all spacecraft designs but reinforce ideas with real-world examples.

The objective of this course is to discuss and understand the following topics:

- Roles and responsibilities of the structural design team members.
- Spacecraft structural design process, concepts, and examples.
- Selection of materials used in spacecraft, including analysis of composite materials.
- Classical strength analysis techniques used by structural designers and analysts.
- Finite Element Method (FEM) software as a tool to the structural analyst.
- Structural testing to verify requirements.

COURSE FORMAT:

Fall 2017 – 15 course meetings including Final Exam, Mondays 6:40-9:20pm
Dates: 21 August 2017 – 27 November 2017, Final Exam 11 December 2017.
On-Campus Location: RTH-105
Additional Notes: Course available through USC Distance Education Network (DEN).

COURSE GRADING:

Semester Project (Due 20 November 2017):	14%
Homework (Due Weekly per syllabus, 12 sets, 3% each):	36%
Mid-term Exam (In-Class, Monday 16 October 2017, 640-920pm):	25%
Final Exam (In-Class, Monday 11 December 2017, 7-9pm):	25%
<hr/>	
Total: 100%	

REQUIRED TEXT AND MATERIALS:

- Instructor's Course Notes posted on Blackboard

OPTIONAL REFERENCE TEXTS:

- *Spacecraft Structures and Mechanisms: From Concept to Launch* by Thomas P. Sarafin(ed)
Space Technology Library, 1995 (fourth printing, 2003) **Paperback Acceptable!**

- *Mechanical Behavior of Materials, 3rd Ed.* by Norman E. Dowling, Prentice Hall, 2006
- *Mechanics of Composite Materials, 2nd Ed.* by Robert M. Jones, Taylor & Francis, 1999
- *Roark's Formulas for Stress and Strain, 7th Ed.* by Warren Young, McGraw-Hill, 2001
- *Formulas for Natural Frequency and Mode Shape* by Robert D. Blevins, Krieger Publishing Company, 2001

SESSION-BY-SESSION OUTLINE:

Class	Date	Topic	Homework Due
1	21-Aug	Course Introduction and Intro to Spacecraft Structures Development: Overview of design process, structures team roles and responsibilities, trade studies, key design considerations, requirements	-
2	28-Aug	Spacecraft Environments and Material Selection for Spacecraft: Environmental loads on spacecraft, Common materials, material properties and testing	1
-	4-Sep	Labor Day Class Does Not Meet	2
3	11-Sep	Spacecraft Configuration Design: Configuration design of subsystem hardware, system mass property calculations	Project Proposal
4	18-Sep	Conceptual Design of Spacecraft: Common types of structures, kinematic mounts, methods of attachment	3
5	25-Sep	Strength of Materials I: Truss analysis, stress and strain definitions, linear elasticity, static failure theories	4
6	2-Oct	Strength of Materials II: Properties of areas, beam bending, column buckling, torsion, pressure vessels	5
7	9-Oct	Strength of Materials III, Midterm Review: Fatigue and fracture, plates and stiffened panels,	6
8	16-Oct	Midterm Exam: In-Class, On CAMPUS, 640-920PM	7 (Midterm)
9	23-Oct	Structural Dynamics I: Introduction to Structural Dynamics and Vibrations	-
10	30-Oct	Mechanics of Composite Materials I: Introduction, fabrication methods, stiffness analysis of laminae, micromechanics	8
11	6-Nov	Mechanics of Composite Materials II: Stiffness analysis of laminates, special laminates, sandwich laminates	9
12	13-Nov	Structural Analysis using Finite Element Method: FEM basics, element types, stiffness matrix, pre and post processors, solvers. FEM Software examples.	10
13	20-Nov	Fasteners and Joint Design: (Guest Lecturer - Joe Ziary) Intro. to fasteners, bolted and riveted structures, welded and adhesively-joined structures	11, Projects Due
14	27-Nov	Structural Testing, Final Exam Review, Project-related Final Exam Given MSL Structural Testing examples, static load testing, modal testing	12
-	4-Dec	Study Day Class Does Not Meet	-
15	11-Dec	Final Exam: In-Class, ON CAMPUS 7-9PM	Project-Related Final

Statement for Students with Disabilities

Any student requesting academic accommodations based on a disability is required to register with Disability Services and Programs (DSP) each semester. A letter of verification for approved accommodations can be obtained from DSP. Please be sure the letter is delivered to me (or to TA) as early in the semester as possible. DSP is located in STU 301 and is open 8:30 a.m.-5:00 p.m., Monday through Friday. The phone number for DSP is (213) 740-0776.

Statement on Academic Integrity

USC seeks to maintain an optimal learning environment. General principles of

academic honesty include the concept of respect for the intellectual property of others, the expectation that individual work will be submitted unless otherwise allowed by an instructor, and the obligations both to protect one's own academic work from misuse by others as well as to avoid using another's work as one's own. All students are expected to understand and abide by these principles. Scampus, the Student Guidebook, contains the Student Conduct Code in Section 11.00, while the recommended sanctions are located in Appendix A: <http://www.usc.edu/dept/publications/SCAMPUS/gov/>. Students will be referred to the Office of Student Judicial Affairs and Community Standards for further review, should there be any suspicion of academic dishonesty. The Review process can be found at: <http://www.usc.edu/student-affairs/SJACS/>.
