ISE 576, Industrial Ecology

Syllabus

Units: 3

Term — Day — Time: Spring 2018 — Mon — 12:30-3:20 pm

Location: OHE 100B & DEN@Viterbi

Instructor: Robert O. Vos, PhD GISP
Office: AHF B57B
Regular Office Hours: Mon and Wed 10-11 am PT Also available other days and times by appointment via email.

Contact Info: vos@usc.edu, 213-821-1311, http://www.bluejeans.com/2418690355

Teaching Assistant: Jonty Pretzer
Office: TBD
Regular Office Hours: TBD

Contact Info: pretzer@usc.edu
Course Scope and Purpose
Industrial ecology (IE) focuses on impacts to the natural world from the sharp increase in the rate and scale of human transformation of the earth following the industrial revolution. Concepts and tools covered in the course identify and measure impacts from the design and operation of the industrial system in categories such as ecological degradation, human health, and resource depletion. IE views these impacts as resulting from the interaction of underlying, complex technological, social, economic, and legal systems. IE is a heavily multidisciplinary field involving science and technology (engineering), public policy, economics, and business operations. The course focuses much less on problem sets than the traditional engineering course. Instead, it aims for understanding of major concepts and the ability to identify and execute a comparative environmental life cycle assessment (LCA) research project that meaningfully aids decision-making with regards to design, operation, or policymaking.

Learning Outcomes
On completion of this course, students should be able to:

- Articulate the core philosophy and principles of industrial ecology as it is practiced globally.
- Identify the benefits and limitations of tools like materials flow analysis, design for environment, environmentally extended input-output analysis, and process-based life-cycle assessment.
- Differentiate and choose appropriately among different tools for measuring environmental impacts of industrial systems.
- Relate the concepts of reverse logistics, industrial symbiosis, and biomimicry to design solutions for sustainability problems in the industrial system.
- Apply and operate screening-level life cycle assessment tools and software in case studies for product and packaging design.
- Conduct a comparative environmental life cycle assessment (LCA) in support of a decisions with respect to design, operations, or policy making for products, products systems, or infrastructure in the industrial system.

Prerequisite(s): Graduate standing or permission of the instructor
Co-Requisite(s): None

Course Structure
The main ongoing activities in this course comprise readings, attendance at lectures, and participation in discussions during lectures or asynchronously online. There are also four homework assignments to be completed, one midterm exam in Week 9 covering Weeks 1-8 of the course, and a cumulative final exam. The major activity of the semester is a final project, performing and reporting on comparative environmental life cycle assessment by teams of 3-5 students, as described below
The course is designed in three overarching sections. The first section of the course provides an overview of concepts and tools in industrial ecology. These include the concepts of systems thinking and industrial symbiosis, as well as an overview of design for the environment (DFE) and materials flow analysis (MFA). The second section of the course provides a more comprehensive coverage of life-cycle assessment (LCA) tools. The third section of the course looks at industrial ecology practice in the domains of consumer products, sustainable cities, energy, and water.

Workload – This is a 3-credit, one semester course. Students should expect to spend on average 9-hours per week completing the work in this course with weeks with heavier time commitment outside of class as the final project unfolds during Weeks 5-15.

Technological and Communication Requirements

Students will need to be able to competently use Microsoft Excel and Microsoft Office to produce the final project. Other than this, screening LCA modeling programs will be provided by the instructor or as freeware from the Internet. Instructions will be given on how to use this software during lectures, but will require additional self-study. These resources can be accessed from student’s homes or offices using their own computers and Internet connections or from USC’s on campus public (i.e., general) computer labs. All student will access course materials through the DEN learning content management system called “D2L.” The DEN students will access class sessions via D2L and Cisco WebEx.

Required Readings and Supplementary Materials

The required textbooks for this course are:

Supplementary readings will be provided on D2L from various sources including:

For the final project in this course, you will also conduct online library research to find articles apply LCA methods in ways analogous to your own study or that provide data points for the system you are characterizing.

**Description and Assessment of Assignments**

**Regular Course Assignments and Exams**

*Homework Assignments – 4 worth 20 points.* There are four homework assignments worth five points each. Two of these are more like conventional problem sets, but require some conceptual work and operation of screening LCA software. The other two call on students to apply concepts learned in class to a case study and in an online discussion.

*Extra Credit Homework Assignment – 1 worth 5 points extra credit.* This homework calls on students to use a screening LCA software to evaluate two alternative designs for packaging orange juice.

*Midterm Exam – 1 worth 15 points.* The midterm is a closed book, 90-minute exam given during class in Week 9. It covers all material from reading, lectures, and homework from Weeks 1-8.

*Final Exam – 1 worth 25 points.* The final exam is a closed book, 120-minute exam given during the scheduled final examination period. It covers all material from reading, lectures, and homework from the entire course.

**Final Project**

The term project is designed to deepen the student’s knowledge in the application of industrial ecology tools and techniques to technological systems. The learning objectives for the project are to be able to:

- Organize and structure a set questions for decision-making related to comparing technological systems, particularly on a life-cycle basis.
- Demonstrate creativity and initiative to analyze the interactions among complex technological system components.
- Competently model environmental impacts of the systems under study, where appropriate on an aggregated, quantitative basis.

The key parts of the final project are as follows:

*Team Formation/Topic Selection – 2 points.* Using the discussion function on D2L, I will give a list of topics to choose from and you should create threads to identify teams. Each team should have at least three and not more than five students. Each team should identify one student to act as “team leader,” who will handle communication with the instructor. The team leader should email the instructor (also with a cc: to the teaching assistant) once the team is formed. This email should name the team members and briefly name and describe the topic in a few sentences. It should also be cc’d to all team members. This all must be accomplished no later than midnight Pacific Time on Sunday, January 21, 2018. Two points will be awarded.
to each student who has been identified as joining a team by the deadline because experience shows that getting an early start on the project is essential to success.

First Project Presentation – 3 points. A detailed set of instructions and a grading rubric for the final project will be distributed during Week 2 of the course. During class in Week 8, teams will give a 10-minute first project presentation with an additional 5-minute discussion period. The first presentation will outline the research question or problem statement related to decision support, and it will give an initial proposal as to the analysis methods to be used. The presentation is graded, but it is worth relatively few points so that it serves primarily as an opportunity for formal feedback from the instructor to keep the team on a productive path. All students are required to be present live or on DEN WebEX for all presentations.

Final Project Oral Presentation - 15 points. A comprehensive 15-minute oral presentation of the final project given during the final class session in Week 15. It will be evaluated primarily on the effectiveness with which problem statement, methods, results, and limitations are concisely explained. All students are required to be present live or on DEN WebEX for all presentations.

Final Project Written Report - 20 points. A written report on your project methodology and outcomes. Detailed instructions will be given in the assignment distributed during Week 2. It will be evaluated both for technical proficiency and its writing quality.

Course Policies

The following are the policies that apply in this course:

- Participate in class discussions and contribute individual or professional experiences when relevant to the topic so that others can benefit and learn.
- Take individual responsibility for completing homework assignments/term project activities and be responsible and collaborative team members for the final project.
• Readings are to be completed before the class sessions where they are indicated. Lectures will supplement but not cover readings, and the readings may be needed to effectively participate in exercises given during class time.
• In-class exercises, listed as “Activity,” happen in the class period and are not graded.
• Unless otherwise noted, homework assignments are due the week after they are listed in the syllabus, allowing for questions or clarification during lectures and assistance during the week, if needed. Times/dates will be set as the Sunday before the next class at midnight on D2L. Links on D2L with specific assignment instructions and deadlines will be provided for submission.
• Late homework submissions or final project submissions will not be accepted and will receive a grade of F.
• Make-up examinations will only be offered in case of valid medical excuses, otherwise a missed examination will result in a grade of F.

**Statement on Academic Conduct and Support Systems**

**Academic Conduct**

Plagiarism – presenting someone else’s ideas as your own, either verbatim or recast in your own words – is a serious academic offense with serious consequences. Please familiarize yourself with the discussion of plagiarism in *SCampus* in Part B, Section 11, “Behavior Violating University Standards” [policy.usc.edu/scampus-part-b](http://policy.usc.edu/scampus-part-b). Other forms of academic dishonesty are equally unacceptable. See additional information in *SCampus* and university policies on scientific misconduct, [http://policy.usc.edu/scientific-misconduct](http://policy.usc.edu/scientific-misconduct).

**Support Systems**

**Student Counseling Services (SCS)** – (213) 740-7711 – 24/7 on call
Free and confidential mental health treatment for students, including short-term psychotherapy, group counseling, stress fitness workshops, and crisis intervention. [engemannshc.usc.edu/counseling](http://engemannshc.usc.edu/counseling)

**National Suicide Prevention Lifeline** – 1 (800) 273-8255
Provides free and confidential emotional support to people in suicidal crisis or emotional distress 24 hours a day, 7 days a week. [www.suicidepreventionlifeline.org](http://www.suicidepreventionlifeline.org)

**Relationship and Sexual Violence Prevention Services (RSVP)** – (213) 740-4900 – 24/7 on call
Free and confidential therapy services, workshops, and training for situations related to gender-based harm. [engemannshc.usc.edu/rsvp](http://engemannshc.usc.edu/rsvp)

**Sexual Assault Resource Center**
For more information about how to get help or help a survivor, rights, reporting options, and additional resources, visit the website: [sarc.usc.edu](http://sarc.usc.edu)

**Office of Equity and Diversity (OED)/Title IX Compliance** – (213) 740-5086
Works with faculty, staff, visitors, applicants, and students around issues of protected class. [equity.usc.edu](http://equity.usc.edu)

**Bias Assessment Response and Support**
Incidents of bias, hate crimes and microaggressions need to be reported allowing for appropriate investigation and response. [studentaffairs.usc.edu/bias-assessment-response-support](http://studentaffairs.usc.edu/bias-assessment-response-support)

**The Office of Disability Services and Programs**
Provides certification for students with disabilities and helps arrange relevant accommodations. [dsp.usc.edu](http://dsp.usc.edu)

**Student Support and Advocacy – (213) 821-4710**
Assists students and families in resolving complex issues adversely affecting their success as a student EX: personal, financial, and academic. [studentaffairs.usc.edu/ssa](http://studentaffairs.usc.edu/ssa)

**Diversity at USC**
Information on events, programs and training, the Diversity Task Force (including representatives for each school), chronology, participation, and various resources for students. [diversity.usc.edu](http://diversity.usc.edu)

**USC Emergency Information**
Provides safety and other updates, including ways in which instruction will be continued if an officially declared emergency makes travel to campus infeasible. [emergency.usc.edu](http://emergency.usc.edu)

**USC Department of Public Safety – UPC: (213) 740-4321 – HSC: (323) 442-1000 – 24-hour emergency or to report a crime.**
Provides overall safety to USC community. [dps.usc.edu](http://dps.usc.edu)

**Library Resources for DEN Students**
All registered students can access electronic library resources through the link [https://libraries.usc.edu/](https://libraries.usc.edu/). Also, the USC Libraries have many important resources available for distance students through the link: [https://libraries.usc.edu/faculty-students/distance-learners](https://libraries.usc.edu/faculty-students/distance-learners). This includes instructional videos, remote access to university resources, and other key contact information for distance students.
