

CE225

Course Syllabus

1/1/2019

Part I Course Organization

CE225 Mechanics of Deformable Bodies(3units)

Lecture: KAP140	Mon 9:00-9:50am	Wed 9:00-9:50am	Fri 9:00-9:50am
Discussion (1of 1)	Fri 10-10:50am KAP147		
Professor	Vincent Lee		
Office	KAP230B		
Phone	213-7400568		
Email	Through https://blackboard.usc.edu and https://piazza.com		
Office Hours	MW 10:00-11:00am other times through Piazza		
Teaching Assistant	tbd		
Office	Meeting at KAP239 or tba		
Email	Through https://blackboard.usc.edu and https://piazza.com		
Office Hours	tbd		
Prerequisites	CE205, Statics		
Textbook(s)	Mecahnics of Materials , 9th ed. Barry J. Goodno and James M. Gere Publisher Cengage Learning ISBN-13: 978-1337093347		
References			
Course Descriptions	Analysis of stress and strain; axial, flexural, and torsional behavior of slender bars; elastic deflections; combined stresses; introduction to elastic stability and energy methods.		
Course Objectives	Students will understand the design process and learn approaches used to solve various engineering problems that are representative of those found in a professional environment. They will practice decision-making skills as they apply their knowledge of basic sciences, mathematics, and the engineering sciences to convert resources optimally to meet the stated needs of a project.		
Learning Objectives	This course will cover the design of beams subjected to vertical, horizontal and moment loads.		
Policies on:			
Late work	Partial Credit		
Make-up work	Partial Credit		
Incomplete work	Partial Credit		
Extra credit	Case by case		
Finalgrade schema isbasedon the following percentagesof gradedcoursework :			
Homework	7	%	
Best 11Quizzes	33	%	
Midterms& Final	60	%	
Total	100	%	

CE225 Mechanics of Deformable Bodies Spring 2018 Class Schedule

Week	Date	Topics	Assignments	Problem Set	Quiz
1	Jan 7-11	Review CE205, Statics; Axially Loaded Bars	2/5-8	#1	
2	Jan 14-18	Jan14 M.L.King Holiday; Axially Loaded Bars	2/9	#2	Mon #1
3	Jan 21-25	Poisson's Ratio, 3D Hooke's Law Normal & Shear Stresses	2/11 1/1-6	#3	Mon#2
4	Jan29 -Feb2	Torsion of Circular Bars	3/1-5	#4	Mon#3
5	Feb 4-8	Torsion (cont.)	3/5-8	#5	Mon#4
6	Feb 11-15	MT#1 on Wed Feb14; Fri: Shear-Moment Diagram(Review);	5/1-5	#6	Mon #5
7	Feb 18-22	Feb18 President's Day; Bending Stresses in Beams;	4/1-5	#7	Wed #6
8	Feb25 -Mar1	Bending Stresses in Beams (cont.); Beam Design	4/5-6	#8	Mon#7
9	Mar 4-8	Shear Stresses in Beams	6/1-5	#9	Mon#8
10	Mar 11-15	Spring Recess			
11	Mar 18-22	Shear Stresses (cont.)	6/5-6	#10	Mon#9
12	Mar 25-29	MT#2 on Mon; Transformation of Stresses	7/1-3	#11	
13	Apr 1-5	Mohr's Circle	7/4-6	#12	Mon#10
14	Apr 8-12	Deflections of Beams	9/1-4	#13	Mon#11
15	Apr 15-19	Deflections of Statically-Indeterminate Beams	9/5,7,8	#14	Mon#12
16	Apr 22-26	More Beam Deflections; Moment-Area Method, Review or MT#3(?) on Fri	9/9	#15	Mon#13
	May3	Fri 8-10am Final			
	May10	Friday: Commencement			

STATEMENT ON ACADEMIC INTEGRITY

USC seeks to maintain an optimal learning environment. General principles of academic honesty include the concept of respect for the intellectual property of others, the expectation that individual work will be submitted unless otherwise allowed by an instructor, and the obligations both to protect one's own academic work from misuse by others as well as to avoid using another's work as one's own.

All students are expected to understand and abide by these principles. *SCampus*, the Student Guidebook, contains the Student Conduct Code in Section 11.00, while the recommended sanctions are located in Appendix A:

<http://www.usc.edu/dept/publications/SCAMPUS/gov/>

Students will be referred to the Office of Student Judicial Affairs and Community Standards for further review, should there be any suspicion of academic dishonesty. The Review process can be found at:

<http://www.usc.edu/student-affairs/SJACS/>

STATEMENT FOR STUDENTS WITH DISABILITIES

Any student requesting academic accommodations based on a disability is required to register with Disability Services and Programs (DSP) each semester. A letter of verification for approved accommodations can be obtained from DSP. Please be sure the letter is delivered to me (or to TA) as early in the semester as possible.

Part II Detailed Course Objectives

ABET Course Syllabus

Course Information, Textbook, and Supplementary Materials

Course Description: Analysis of stress and strain; axial, flexural, and torsional behavior of slender bars; elastic deflections; combined stresses; introduction to elastic stability and energy methods.

Required for: BSCE, BSCE Structural, BSCE Building Science, and BSCE Environmental

Prerequisites: CE 205 Statics

Co-Requisite: none

Required Textbook: Beer, Johnston & DeWolf, *Mechanics of Materials*, 4th ed. (2006)

Reference: none

Topics Covered	Learning Outcomes
Analysis of stress and strain; flexural and torsional behavior of slender bars; elastic deflections; combined stresses; introduction to elastic stability and energy methods	<p>Students will understand the following topics, and perform analyses and calculations in these areas of study</p> <ol style="list-style-type: none"> 1. Internal forces of members subjected to axial and torsional loads 2. Stress and strain, 1-D and generalized Hooke's Law Stresses, strains and deformations of axially loaded members 3. Stresses, strains and rotations of torsionally loaded circular bars 4. Normal and shear bending stresses in beams 5. Combined stresses, Mohr's circle 6. Beam Deflections in statically determinate and indeterminate problems 7. Design of beams subjected to vertical, horizontal and moment loads
Analysis of the internal forces and moments of a structure	<ol style="list-style-type: none"> 8. Determine the axial forces of both statically determinate and indeterminate members 9. Determine the axial torques in both statically determinate and indeterminate circular solid and hollow shafts 10. Determine the internal shears, moments and axial force reactions in beams, and draw the Shear and moment diagrams
Analysis of stress	<ol style="list-style-type: none"> 11. Determine the internal stresses of statically determinate and indeterminate members 12. Determine the internal stresses of statically determinate and indeterminate circular solid and hollow shafts 13. Determine the normal and shear bending stresses in rectangular beams, beams with flanges and built up beams of various shapes 14. Determine the principal and maximum shear stresses by the transformation formula and/or Mohr's circle for plane stress
Deflections in a loaded beam	<ol style="list-style-type: none"> 15. Calculate beam deflections by direct integration, superposition and moment-area methods 16. Analyze the statically indeterminate beams

Lecture and Lab Schedule

Contribution of Course to Meeting the Professional Component

Engineering Topics | Design

Students will understand the design process and learn approaches used to solve various engineering problems that are representative of those found in a professional environment. They will practice decision-making skills as they apply their knowledge of basic sciences, mathematics, and the engineering sciences to convert resources optimally to meet the stated needs of a project

This course will cover the design of beams subjected to vertical, horizontal and moment loads.

Engineering Topics | other

Constraints and Considerations. Students will understand the diverse constraints and considerations that are representative of what they will encounter in an engineering practice. This course covers the following topics:

Economic | Manufacturability

Relation of Course

Objectives to Program Outcomes

The Civil Engineering program is designed to teach beyond the technical content of the curriculum and prepare the students to utilize what they learn in a professional setting.

This course contributes to the program outcomes as outlined in the adjacent table:

Course Contribution to Program Outcomes (a-k)	Key
a) An ability to apply knowledge of mathematics, science, and engineering. i) Recognize the need for and to engage in lifelong learning.	✓

Prepared by: V. Lee
Professor of Civil Engineering

Date: Spring 2016
