SSCI 580, Spatial Computing

Syllabus

Units: 4

Term — Day — Time: Spring 2019, Wednesdays and Fridays, 10:00 a.m. to 11:50 a.m.

Location: AHF 145D

Instructor: Andrew J. Marx, Ph.D
Office: AHF B55
Regular Office Hours: Wednesdays and Fridays 9-10 a.m. PT. Also available most days and times by appointment via email.
Contact Info: marxa@usc.edu, 213-740-2835 (Pacific), https://bluejeans.com/marxa

Library Help: Andy Rutkowski
Office: VKC 36B
Office Hours: Tuesdays, 10 a.m.-12 p.m. and Thursdays, 4:30-5:30 p.m. PT

IT Help: Richard Tsung
Office: AHF 145D
Office Hours: By appointment
Contact Info: ctsung@usc.edu, 213-821-4415 (office)
**Course Scope and Purpose**

Spatial computing is a set of ideas and technologies that will transform our lives by enhancing our understanding of the physical world, knowing and communicating our relation to places in that world, and navigating through those places. It draws upon engineering, computer science, math, and spatial thinking to solve data-intensive, large-scale, and location-based problems. This class will cover the concepts, theory, methods, techniques, and programming for spatial computing. This includes the latest research in a variety of topics that are central to spatial computing, including geospatial mashups, cyberGIS and cloud GIS, spatial data Mining, essential python geospatial libraries, volunteered geographic information (VGI) and big data, geocoding and the geospatial semantic web. Students will also gain a deep understanding and hands-on software experience, including ArcGIS Desktop, Google Map and Google Earth, Hadoop, and CyberGIS applications.

As an example of a typical lab in class, students will install and use an advanced Python Geospatial library - GeoPandas and all its dependencies. They will download European land use and land cover data for large urban zones from the Urban Atlas website. They will use GeoPandas to do spatial operations based on geometric types, such as re-projecting and making choropleth maps of density of the urban fabric, querying the centroid and distance between an airport and a neighborhood, creating a buffer around green urban areas, and selecting cities that all connect to the same railway. With GeoPandas, students can easily do operations for Big Spatial Data in Python that would otherwise be too time-consuming for ArcGIS Desktop or require a spatial database such as PostGIS.

In this way, students will learn how to collect, analyze, and visualize large-scale spatial datasets while avoiding common pitfalls and building better data-intensive applications and location-aware technologies. Students will also gain a deep understanding about related fundamental research questions in individual disciplines and cross-cutting research questions requiring novel, multi-disciplinary solutions.

This is a required course for the M.S. in Spatial Data Science program.

**Learning Outcomes**

On completion of this course, students should be able to:

- Discuss the relevant web-based geographic information systems and techniques for working with geospatial data;
- Empower high-performance and scalable cyberGIS by exploiting spatial characteristics of data and analytical operations for achieving unprecedented capabilities for geospatial scientific discoveries;
- Build and use cloud services that combine geographic data, application, software, or platform as open source solutions for spatial issues.
- Apply relevant spatial data mining techniques to solve a variety of spatial problems;
- Select and use external Python geospatial libraries to solve real-world problems with greater flexibility;
• Discuss volunteered geographic information and how it relates to big geospatial data and GIS design;
• Exploit methods to geocode text data;
• Discuss how semantic web technology fits into the present and future evolution of GIS, and how it differs from existing data-sharing technologies, such as relational databases and the current state of the World Wide Web.

Prerequisite(s): None
Co-Requisite(s): None
Recommended Preparation: SSCI 581: Concepts for Spatial Thinking

Course Structure

This residential course will unfold on a weekly basis. Each week will be focused on a particular aspect of Spatial Computing, delivered through lectures, reading assignments, class participation, and hands-on computer lab assignments. In addition to the assigned readings, students will receive an extensive list of Supplementary Readings. Students are encouraged to bring questions and problems to class to be explored in that congenial setting. The aim is to encourage deep-learning by active participation. This class is designed for discussion and readings the first meeting of the class each week, and a hands-on or lab in the second meeting of the week. The labs are designed to give students first-hand experience with the wide variety of software and programming packages that can be used for spatial computing. At the end of this semester, students will complete a final project including a 20-minute presentation, a poster, and a report (double-spaced, 12-point font, and no more than 8 pages in length).

Workload – This is a four credit, one semester course. Students should expect to spend 10-15 hours per week completing the work in this course.

Technological and Communication Requirements

ArcGIS is provided online via the GIST Server; hence, you do not need to install it on your own computer. Instead, every student must have the following technology requirements:

• A computer with a fast Internet connection.
• A functional webcam and a microphone for use whenever a presentation or meeting is scheduled.
• An up-to-date web browser to access the SSI Server

SSI Server and Tech Support – This course utilizes the SSI Server which is a virtual desktop giving access to many different professional software. If you are unable to connect to the server or experience any type of technical issues, send an email using your USC account to SSI Tech Support at ssi_support@usc.edu, making sure to copy (cc) me on the email.

• Discussion forums – On the Blackboard site, I will post weekly discussion threads relevant to the reading and hands-on assignments of the course. Discussions provide a key means for student-to-student discussion and collaboration. Students will post review reports related to the reading assignments and make comments on each other’s
review reports. Students can also provide support to each other while working on assignments, sharing hints and helpful tips. I monitor the discussion threads and will offer comments when appropriate, but more importantly, consider the discussion board a key way to connect with your classmates and share your discoveries.

Required Readings and Supplementary Materials

A mixture of readings from academic journals, professional reports and authoritative websites will be provided for this course. The following readings are required and are listed in course order. All readings listed in the syllabus are available in the weekly folders on the course Blackboard:

• Goldberg, Daniel W., & Myles G. Cockburn. “Improving geocode accuracy with

As well, for several of the assignments in this course, you will conduct online library research to find articles that apply specific techniques in an application area of your choice.

**Description and Assessment of Assignments**

**Weekly Assignments**

There are several different kinds of assignments with at least one due weekly. These are described in the Weekly Folders on Blackboard. Due dates are shown in the summary that follows.

**Resume Assignment – 1 worth 2 point.** We require all current students to post and maintain a public resume, short biography and recent photo on our shared SSI Student Community Blackboard site. Please prepare your resume in the SSI template which will be provided to you. Unless you opt out, your resume will be included in the Spatial Sciences Institute Graduate Programs Resume Book. This resume book is compiled annually and, along with our web presence, is used to promote our programs, and more importantly, your skills, experience and professional aspirations.

**Reading Responses - 13 worth a total of 26 points.** Before the first class each week, students will do the assigned readings and post a response to them on Blackboard. The posting should be less than 200 words and informally discuss what you found interesting in that reading. It may include what you agree/disagree with, what critiques you have, or links to other relevant materials (websites, videos, etc.).

**Lead Class Discussion – varies worth a total of 8 points.** Each student will be responsible for leading several class discussions on the assigned readings. They will do several separate 30-min presentations about the assigned readings and prepare 2-3 questions to lead a 15-min discussion.

**Lab Assignments – 12 worth a total of 36 points.** Students will be assigned 12 “hands-on” lab assignments during the semester.
Final Project

To integrate your learning of all the material covered in the course, in the final project you will design, undertake, and report on an individually-chosen project using spatial computing. The four project components will be due at different times during the semester to build gradually on the material presented in the course. All points for project components will be assigned using a grading rubric provided at the time the project assignment is posted. The four components of the Project are:

Proposal - 2 points. A brief description of the spatial question(s) you would like to ask or the spatial problem you want to solve and how you plan to solve it.

Project Presentation - 10 points. A presentation of your final project made in class, open to all students. I will give comments and suggestions directly after your presentation. Then, other students will ask questions or make comments on your project.

Project Report - 10 points. A written report of your final project (double-spaced, 12-point font) no more than 8 pages in length on your project methodology and outcomes.

Poster - 6 points. An academic poster of your final project that shows the introduction, background, methods, results, conclusions, discussion, and references. You will share the electronic version of it with the whole class on Bb and provide some comments about the scientific design of your academic poster.

Assignment Submission Policy

Unless otherwise noted, assignments must be submitted via Blackboard by the due dates specified in the Course Schedule below and on the assignment instructions.

Strict penalties apply for late assignments as follows:

- All assignments will be penalized 2 points up to FOUR days late. No points will be given for submissions more than FOUR days late. Note that all assignments worth 2 points will receive 0 points if submitted late.
- Additionally, no written work will be accepted for grading after 5 pm PT on the last day of classes.

**Statement on Academic Conduct and Support Systems**

**Academic Conduct**

Plagiarism – presenting someone else’s ideas as your own, either verbatim or recast in your own words – is a serious academic offense with serious consequences. Please familiarize yourself with the discussion of plagiarism in *SCampus* in Part B, Section 11, “Behavior Violating University Standards” [policy.usc.edu/scampus-part-b](http://policy.usc.edu/scampus-part-b). Other forms of academic dishonesty are equally unacceptable. See additional information in *SCampus* and university policies on scientific misconduct, [http://policy.usc.edu/scientific-misconduct](http://policy.usc.edu/scientific-misconduct).

**Support Systems**

*Student Counseling Services (SCS) – (213) 740-7711 – 24/7 on call*  
engemannshc.usc.edu/counseling

Free and confidential mental health treatment for students, including short-term psychotherapy, group counseling, stress fitness workshops, and crisis intervention.

*National Suicide Prevention Lifeline – 1 (800) 273-8255 – 24/7 on call*  
www.suicidepreventionlifeline.org

Provides free and confidential emotional support to people in suicidal crisis or emotional distress 24 hours a day, 7 days a week.

*Relationship and Sexual Violence Prevention Services (RSVP) – (213) 740-4900 – 24/7 on call*  
engemannshc.usc.edu/rsvp

Free and confidential therapy services, workshops, and training for situations related to gender-based harm.
Office of Equity and Diversity (OED)/Title IX Compliance – (213) 740-5086
equity.usc.edu, titleix.usc.edu
Information about how to get help or help a survivor of harassment or discrimination, rights of protected classes, reporting options, and additional resources for students, faculty, staff, visitors, and applicants. The university prohibits discrimination or harassment based on the following protected characteristics: race, color, national origin, ancestry, religion, sex, gender, gender identity, gender expression, sexual orientation, age, physical disability, medical condition, mental disability, marital status, pregnancy, veteran status, genetic information, and any other characteristic which may be specified in applicable laws and governmental regulations.

Bias Assessment Response and Support – (213) 740-2421
studentaffairs.usc.edu/bias-assessment-response-support
Avenue to report incidents of bias, hate crimes, and microaggressions for appropriate investigation and response.

The Office of Disability Services and Programs – (213) 740-0776
dsp.usc.edu
Support and accommodations for students with disabilities. Services include assistance in providing readers/notetakers/interpreters, special accommodations for test taking needs, assistance with architectural barriers, assistive technology, and support for individual needs.

Student Support and Advocacy – (213) 821-4710
studentaffairs.usc.edu/ssa
Assists students and families in resolving complex personal, financial, and academic issues adversely affecting their success as a student.

Diversity at USC – (213) 740-2101
diversity.usc.edu
Information on events, programs and training, the Provost’s Diversity and Inclusion Council, Diversity Liaisons for each academic school, chronology, participation, and various resources for students.

USC Emergency - UPC: (213) 740-4321, HSC: (323) 442-1000 – 24/7 on call
dps.usc.edu, emergency.usc.edu
Provides safety and other updates, including ways in which instruction will be continued if an officially declared emergency makes travel to campus infeasible.

USC Department of Public Safety – - UPC: (213) 740-6000, HSC: (323) 442-120 – 24/7 on call
dps.usc.edu
Non-emergency assistance or information.
