Course Description

This is a project course that is intended to provide students with hands-on experience, working in teams, to develop problem statements and minimum viable products (prototypes) for defense, homeland security, and intelligence communication applications. This semesters problems will be drawn from communities of users with needs in these application areas to assist soldiers in the battlefield or on humanitarian missions, to assist in cyber-defense of critical infrastructure, to assist in identification of threats, and with other problems provided by sponsors from the Department of Defence, Intelligence Communities and Homeland Security. Teams working on projects will be drawn from across multiple diciplines.

Learning Objectives

- Students will learn how to apply the principles of the lean startup methodology for to define problems with applicability to defense.
- Students will learn how to interview beneficiaries (customers) to identify requirements and desired characteristics of problem solutions.
- Students will learn to use the mission model canvas (MMC) to discover the value proposition of candidate approaches to a problem.
- Students will learn to pivot during problem definition when they discover initial hypotheses regarding a problem were incorrect.
- Students will apply their engineering/scientific/ and business skills to defining problems and developing candidate solutions.

Prerequisite(s): N/A

Co-Requisite(s): N/A

Concurrent Enrollment: N/A

Recommended Preparation: Programming Skills

Technological Proficiency and Hardware/Software Required

Technological background necessary to contribute to the teams working on specific problems will be necessary, but this background will vary depending on the project selected.

Required Readings and Supplementary Materials

Materials are describe in the detailed syllabus that follows.

Description and Assessment of Assignments

Description of assessment is included in the detailed syllabus that follows.

Grading Breakdown

15%	Participation (i.e. giving feedback to your peers)
15%	Out-of-the-building progress as measured by blog write-ups and presentations <i>each week</i> . Each week, team members must complete required number of activies and update the Mission Model Canvas.
40%	Team weekly "lesson learned" update presentation (see weekly schedule for required content and format). While presentations are given as groups, the

presentations led each week by a single student in each team, and grades will be based in part on each student's individual level of mastery of their team's activities.

30% Team final presentation (see Weeks 13 and 14 for format)

Scores between 0 and 4.3 will be assigned for each component of the grade. A weighted average will be calculated at the end of the semester and that average used to assign letter grades.

This can be accomplished easily with an iPad or other media device using various software options. Have your Teaching Assistant plan for this if you intend to live stream. This is highly recommended by past teaching team cohorts.

H4D Final Assignment

Deliverable: On [Date] each team will present a 10-minute “Lessons Learned” presentation (2 min video summarizing journey; 8 min final presentation) and will have 5 min Q&A from the teaching team.

Goal: Communicate what you learned in 10 weeks and how you learned it. Show what you learned and how you learned it.

Use the language of class: interview, iterations, pivots, restarts, experiments, MVPs, evidence. The focus of your presentation will be on how you gathered evidence and how it impacted your understanding of your business models, while you were building your MVP.

Strategy: Tell us how you used customer discovery and MVPs to evolve your mission model through iterations, and how the accumulation of evidence outside the classroom led you to pivot.

Tactics:

- Initial hypotheses and petal diagram
- Quotes from customers that illustrate learnings insights
- Diagrams of key parts of the Canvas: customer flow, channel, get/keep/grow (before and after)
- Pivot stories
- Screenshots of the evolution of MVP
- Demo of final MVP
- Bring any “show and tell” items
