INFORMATICS PROGRAM
INF 560: Data Informatics Professional Practicum
(4 units)

Syllabus

Term-Day-Time
Spring 2020- Tuesday 2:00-5:20pm

Location: MHPB7B

Instructor: Dr. Anna Farzindar
Email: farzinda@usc.edu

Professor’s Office Hours:
Office: Physical (GER 202B) or virtual address
Office Hours: Tuesday Before class

Students are advised to make appointments with the professor ahead of time in any event and be specific with the subject matter to be discussed. Students should also be prepared for their appointment by bringing all applicable materials and information.

Catalogue Description:
Student teams working on external customer data analytic challenges; project/presentation based; real client data, and implementable solutions for delivery to actual stakeholders; capstone to degree.

Expanded Course Description:
One of the fundamental principles of informatics science is the ability to live in the data. It is necessary to gain a level of immersion in the information environment to truly apply the diverse skill sets necessary to both become an effective analyst, and provide customers solutions to hard problems. While students will get a sense of this paradigm in many of the courses focused on knowledge and skill enhancement throughout their degree matriculation, the goal of this course is to combine previously learned capabilities and apply them against actual data sets, in real data environment, and toward solving difficult challenges for an external stakeholder.

The Data Informatics Professional Practicum is a capstone experience designed to allow students exposure to the world of data analytics from the perspective of the organization. Students will work with external stakeholders on a project that answers an organizational problem. Each semester, the Informatics program will partner with an external organization, which will pose a broad business requirement to the class. Students will team and propose projects around this requirement, and be responsible for delivering an informatics-based solution to the stakeholder. This product will consist of a
not less than 50 page report detailing the proposal, methods utilized in the analysis, the output from the analysis, and conclusions and recommendations based on the study. Students will also be responsible for a not less than 30-minute presentation on their project to the stakeholder.

A possible example of a capstone project would be: Google volunteers to be the external partner. They obviously are one of the main collectors and brokers of information in the world. One of their areas of philanthropic interest is disease monitoring. Google might pose the question “How can the data Google collects in general could be better utilized to inform on disease, or help mitigate disease, in various areas in the world?” It would be up to the student teams to proposal a project plan, design a study, implement the analysis, and report conclusions and recommendations.

The Professional Practicum (INF 560) provides an opportunity to face real-world challenges and to develop your personal innovative project in cooperation with the members of your team. The combination of industry and academic experiences will provide a peek at what to expect as a data informatics experts and data scientist, in addition to providing project management techniques such as lean six sigma aimed at efficiency and effectiveness.

Learning Objectives
• Expected learning outcomes for students are:
  • To understand how to apply the various engineering and business principles studied in Data Informatics curriculum toward solving an organizational challenge
  • To handle difficulties associated with defining and organizing a realistic problem
  • Statement
  • To manage impediments in obtaining information and approval
  • To present and sell ideas to higher-level management
  • To understand the importance of the need for a continuous exchange between engineers, management and employees in solving an existing problem, given a set of constraints
  • To meet aggressive deadlines in a multidisciplinary team effort
  • To improve project-based presentation skills, both in-class and in company settings
  • To understand the requirements and objectives of customers, how these vary, and how one must tailor a solution to the expectations of a customer
  • To understand how informatics are viewed in diverse domains; and how solutions and approaches will differ in various fields
  • To understand how to work with individuals from diverse domain (engineering, business, etc.) to accomplish a common goal

Students are expected to have foundational knowledge in data management, machine learning, data mining, and data visualization, as well as other topics associated with the Data Informatics degree program. The course can be taken by students in the ISE Analytics program and/or the Marshall Business Analytics program (being created) as well as the Data Informatics program. Course is usually taken after other courses in the program. This class will be primarily group work, with some assigned readings, and a major project and presentation that will count for the primary grade in the course.
Assignments/Reports/Project

The major deliverable from this course is a written project report that reflects a proposed solution, and subsequent results, for an external stakeholder. At the first class meeting, the external partner will be introduced, and a problem/requirement posed. Students will then divide into teams. All projects are team projects. All topics will be unique, and there should be high levels of collaboration on the projects with team members and the professor. Students are required to meet with the professor not less than three times during the semester. Students are required to submit three progress reports throughout the course. There will be a midterm.

There will be three inputs to students’ final grades: 1) instructor evaluation; 2) peer review; and 3) evaluation by external stakeholder.

NO PROJECTS WILL BE ACCEPTED LATE, AND STUDENTS MUST PRESENT THEIR FINDINGS ON THE DAY SELECTED DURING THE SEMESTER.

Class Communication:
Blackboard at USC will be used for class communication.

Grading Schema:

<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Course Project Report and Presentation (Includes peer reviews):</td>
<td>25%</td>
</tr>
<tr>
<td>Sponsor Review of Report, Presentation, and Findings:</td>
<td>20%</td>
</tr>
<tr>
<td>Assignments:</td>
<td>15%</td>
</tr>
<tr>
<td>Quizzes:</td>
<td>15%</td>
</tr>
<tr>
<td>Midterm:</td>
<td>15%</td>
</tr>
<tr>
<td>Monthly Reports and Instructor Meetings:</td>
<td>10%</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>100%</strong></td>
</tr>
</tbody>
</table>

Grades will range from A through F. The following is the breakdown for grading:

- 94 - 100 = A
- 90 – 93 = A-
- 87 – 89 = B+
- 84 – 86 = B
- 80 – 83 = B-
- 77 – 79 = C+
- Below 60 is an F
## Class Structure & Schedule:
Class sequence, dates, topics and guest speakers are subject to change as the semester proceeds. Any revisions will be noted and announced in class in advance.

<table>
<thead>
<tr>
<th>Week</th>
<th>Topic</th>
<th>Readings/Notes</th>
<th>Homework</th>
</tr>
</thead>
<tbody>
<tr>
<td>Week 1</td>
<td>Orientation, Requirement Outline, Developing Project Ideas, Fundamentals of Project Management</td>
<td>Overview of project management in Data informatics Post-class, teams will be formed</td>
<td>Ref: Fundamentals of Project Management (Worksmart) : Joseph Heagney</td>
</tr>
<tr>
<td>Week 2</td>
<td>External Partner presentation, Lean Thinking, Lean Six sigma, Deliverables, DMAIC(^1), Analytics in the “real world”</td>
<td>The external sponsor will present and challenge the class Proposals briefs (1-3 pages outlining “big idea”) will be completed</td>
<td>Team Formation, Project Selection, Proposal Briefs</td>
</tr>
<tr>
<td>Week 3</td>
<td>Value stream mapping, Quality, Variability, and Role of the Analyst</td>
<td>Project Initiation; Prepare Monthly Report Proposal Brief Review – schedule time with instructor</td>
<td>Proposal Briefs Due (assignment 1)</td>
</tr>
<tr>
<td>Week 4</td>
<td>Root Cause Analysis, Teams, People, Lean Engineering</td>
<td>Schedule Time to Meet with Instructor</td>
<td>Process Mapping and Value Stream Mapping (assignment 2)</td>
</tr>
<tr>
<td>Week 5</td>
<td>Understanding the Analytics Product in Business, Improve</td>
<td>You must meet with your instructor this week to review monthly report</td>
<td>NA</td>
</tr>
<tr>
<td>Week 6</td>
<td>Total project management and Theory of Constraints</td>
<td>Project Work Time</td>
<td>First Monthly Report Due (assignment 3)</td>
</tr>
<tr>
<td>Week 7</td>
<td>Mid-Term Review</td>
<td>Half of class dedicated to mid-term review Remainder of class dedicated to project presentation</td>
<td>Team Presentation on Monthly report</td>
</tr>
<tr>
<td>Week 8</td>
<td>Mid-Term, Project Work Time</td>
<td>Mid-Term Schedule meeting with instructor</td>
<td>Second Monthly Report</td>
</tr>
<tr>
<td>Week 9</td>
<td>Stakeholder Session</td>
<td>Stakeholder will be in class to review progress, answer questions, Students will provide the presentations.</td>
<td>Instructor Meeting</td>
</tr>
</tbody>
</table>

---

\(^1\) DMAIC refers to a data-driven quality strategy for improving processes, and is an integral part of the company's Six Sigma Quality Initiative. DMAIC is an acronym for five interconnected phases: Define, Measure, Analyze, Improve, and Control.
<table>
<thead>
<tr>
<th>Week 10</th>
<th>Leadership &amp; Innovation in Start-ups</th>

Books and Readings:

All books, papers or reports will be available to students in one of three ways: 1) in the USC bookstore; 2) via a CD that the instructor will provide at the beginning of class; and/or 3) via the web.

Assigned Reading and Media List:

Eric Siegel, “Predictive Analytics: The power to predict who will click, buy, lie, or die,” Wiley, Feburary 2013.
