GERO 498: Nutrition, genes, longevity and diseases

Maymester Spring/Summer 2020
4 Units

Time: 2:00pm - 4:50pm California time OR 9-12 AM California time (See specific classes)
Room: All Lectures will be held online using the Zoom application

Course Instructors:

Valter D. Longo, Ph.D.
Phone: (213) 740-6212 Fax: (213)740-5714 E-mail: vlongo@usc.edu
Office Hours: By appointment

Raffaella Ghittoni, Ph.D
Email: rghitton@usc.edu
Office hour: by appointment on Zoom (please schedule a meeting by email)

Please note that E-mail is the best way to be sure to contact the instructors

Course Description

This course is intended to teach students about the important role of nutrition and genes and the impact each has on longevity and diseases, particularly diseases related to aging. This course is unique in that it approaches these subjects through a traditional didactic approach as well as a “on location” approach to learning. This is accomplished by allowing students to have the opportunity to learn in an environment that has proven to be conducive to healthy aging. Students will be encouraged to observe and compare the lifestyle choices people make through their activities of daily living and dietary choices. Students will also be strongly encouraged to live as much as possible the Mediterranean life style with emphasis on the Mediterranean diet and an active lifestyle. In particular the class will try to emphasize the Mediterranean diet and life style of 50-100 years ago, which is still adopted by the older population but often not by younger individuals. For many students, this month-long immersion in the Mediterranean life style, could have a life-long impact.

In the classroom students will examine the effect of nutrition and genes modulated by nutrients on aging and life span in simple organisms and humans. The course will provide an introduction to the biology of aging and to the mechanisms for the extension of the healthy life span and the prevention of age-related diseases. The course will also describe the effect of common but also extreme diets and of diets adopted by very long-lived populations from around the world on aging and diseases. Specific populations with unusually long life spans will be examined as part of the course. Finally the course will discuss the role of diets, dietary restriction and fasting in the treatment of diseases with emphasis on cancer, diabetes, cardiovascular and neurodegenerative diseases. Students will be given actual case reports from doctors and/or clinical trials describing the translation of these approaches to disease prevention and treatment. For example, they will learn about the effects of fasting on the side effects caused by chemotherapy and they will see the effects of dietary restriction on hypertension and diabetes. Students will be responsible for more in-depth study of selected topics through assigned readings.
Prerequisite
It is recommended that students have had 1 prior undergraduate-level courses in biology. However, students without this background, can still perform well in the class with the appropriate effort.

Course Objectives
By the conclusion of the course, students are expected to be able to:

1) Understand the fundamental biology underlying aging and age-related diseases.
2) Understand the role of different dietary components on gene expression, cell function and protection, aging and diseases.
3) Describe the type of diets that can extend the healthy life span and why.
4) Understand how biogerontology can be applied to disease treatment and its role in medicine.
5) Have a general understanding of the role of different types of exercise on physiology, aging and diseases.
6) Understand how to apply evolutionary and comparative biology approaches to the optimization of health, disease prevention and treatment.
7) Understand the differences in the diet and lifestyle of people from Mediterranean area and Americans. Students should be able to identify the differences that are known to affect aging and diseases.

Online class organization
All lectures are held online using the USC Zoom application. During lectures, students attendance in class is mandatory (see “participation points”). Students that are following the course from different countries or time zones could be eventually exempted on a case by case basis, prior communication of their current location. Lecture recordings will be accessible to all students.

Online Course Materials:
Course materials and announcements will be posted on the Blackboard website. Your USC e-mail username and password will allow you to access the secure site: https://blackboard.usc.edu (if you have trouble with Blackboard, please contact blackboard@usc.edu) Students are responsible for checking additional postings and announcements on Blackboard website on a daily basis.

Students with Disabilities (the information below was provided by the office of the Provost)
“Any student requesting academic accommodations based on a disability is required to register with Disability Services and Programs (DSP) each semester. A letter of verification for approved accommodations can be obtained from DSP. Please be sure that the letter is delivered to any of the Instructors as early in the semester as possible. DSP is located in on campus in STU 301, and is open from 8:30 a.m. - 5:00 p.m., Monday through Friday. The phone number for DSP is (213) 740-0776.”

Statement on Academic Integrity
USC seeks to maintain an optimal learning environment. General principles of academic honesty include the concept of respect for the intellectual property of others, the expectation that individual work will be submitted unless otherwise allowed by an instructor, and the obligations both to protect one’s own academic work from misuse by others as well as to avoid using another’s work as one’s own. All students are expected to understand and abide by these principles. Scampus, the Student Guidebook, contains the Student Conduct Code in Section 11.00, while the recommended sanctions are located in Appendix A: http://www.usc.edu/dept/publications/SCAMPUS/gov/. Students will be referred to the Office of Student Judicial Affairs and Community Standards for further review, should
there be any suspicion of academic dishonesty. The Review process can be found at: http://www.usc.edu/student-affairs/SJACS/.

Textbook
None. Articles will be used instead of the textbook and distributed at the beginning of the class. Students will have to become familiar with pubmed searches and with identifying and downloading articles

Full text journals
Many full text journals are available to free to USC students at: http://www.usc.edu/e_resources/hsl/lists/journal_A.php

If signing in from outside USC, the USC username and password used for emails will be required.

Student Evaluation
Students will be evaluated on the basis of:
1) Midterm (45%)
2) Final (45%)
3) Attendance and participation (10%)
Gero 498  CLASS SCHEDULE

WEEK 1 class meets remotely

**Tuesday, May 19**  Remotely. 2-4:50 pm. Valter Longo, Introduction to Aging.

Readings:
http://www.sciencemag.org/content/328/5976/321/suppl/DC2
(a slide show introduction to aging by Science magazine)

**Wednesday, May 20**  Aging and pollution. Remotely, 2-4:50 pm. Caleb Finch Guest lecturer

Readings:
Finch CE, Crimmins EM. Constant molecular aging rates vs. the exponential acceleration of mortality.

Trumble BC, Finch CE. THE EXPOSOME IN HUMAN EVOLUTION: FROM DUST TO DIESEL.

Longo VD, Finch CE. Evolutionary medicine: from dwarf model systems to healthy centenarians?

Finch CE, Morgan TE. Developmental Exposure to Air Pollution, Cigarettes, and Lead: Implications for Brain Aging.
Annual Review of Developmental Psychology Volume 2 (2020)

Finch CE. Organisms with negligible senescence. MolBiolAging 2015

**Thursday, May 21.**

1) *Introduction to the biology of aging (continued), theories and aging mechanisms at the molecular, and cellular level.* Valter Longo. Remotely, 2-4:50 pm.

2) *Aging in microorganisms.* Valter Longo

Readings:

http://www.sciencemag.org/content/328/5976/321/suppl/DC2

(a slide show introduction to aging by *Science* magazine)

**Friday, May 22**: Christian Pike. Aging and Alzheimer's Disease. Remotely, 2-4:50 pm.

Readings

**The Amyloid Hypothesis of Alzheimer's Disease: Progress and Problems on the Road to Therapeutics**
John Hardy and Dennis J. Selkoe
*Science* 297, 353 (2002);
DOI: 10.1126/science.1072994

When neurogenesis encounters aging and disease

**WEEK 2 class meets remotely**

**Monday, May 25**: NO CLASS MEMORIAL DAY

**Tuesday, May 26.**

Sugar, obesity and diseases. Remotely, 2-4:50 pm. Michael Goran

**“Role of Dietary Sugars in Obesity and Related Metabolic Diseases”**
Michael Goran is a Professor of Preventive Medicine, Physiology and Biophysics He is the founding Director of the USC Childhood Obesity Research Center and holds the Dr Robert C and Veronica Atkins Endowed Chair in Childhood Obesity and Diabetes.

Dietary consumption patterns have shifted during the course of prior generations towards greater consumption of sugars, sugary beverages and fructose and an earlier introduction of these sugars to infants. These changes have important implications in the development of obesity and risk of metabolic diseases including type 2 diabetes, cardiovascular disease and non alcoholic fatty liver disease (NAFLD). These dietary shifts are also likely to have a greater impact during infancy and childhood because infants and children are also undergoing growth and development. Furthermore, increased dietary sugars have a greater impact on obesity and metabolic risk in certain segments of the population including Hispanics, those who are already obese, and in the case of NAFLD, those carrying
the PNPLA3 genotype. In this lecture, I will review emerging studies indicating that consumptions of sugars and sugar sweetened beverages is beginning to occur early in life and this early life exposure is associated with increased risk of obesity by early childhood. In addition, I will review the evidence linking dietary intakes of sugars, especially fructose with altered metabolism and early obesity in animal models and limited human studies. I will review the evidence suggesting that high fructose exposure during critical periods of development of the fetus, neonate and infant can act as an obesogen by affecting lifelong neuroendocrine function, appetite control, feeding behaviour, adipogenesis, fat distribution and metabolic systems. These changes ultimately favour the long-term development of obesity and associated metabolic risk. This lecture will be presented by Dr Michael I Goran from the Keck School of Medicine. Dr Goran is Professor of Preventive Medicine, Co-Director of the USC Diabetes and Obesity Research Institute and the holder of the Atkins Endowed Chair in Childhood Obesity and Diabetes.

**Suggested Reading**

**Wednesday, May 27**: Intermittent Fasting, Therapeutic Fasting, and Ketogenic Diets.
Raffaella Ghittoni, PhD. Remotely, 2-4:50 pm.

An introduction to: 1) The different and most popular intermittent fasting practices including alternate day fasting, 16:8, 5:2 and alternate day fasting, 2) Therapeutic fasting, as practiced by in patient clinics, 3) Ketogenic diets

**Thursday May 28**

**Genetics of Aging in mice and humans.** Valter Longo. Remotely, 2-4:50 pm.

**Friday, May 29**: Hanno Pijl, MD,PhD. University of Leiden, Holland **CLASS AT 9-12 AM California Time**

Dr Hanno Pijl, MD, PhD is an endocrinologist and a professor of Diabetology at the Department of Internal Medicine of the Leiden University Medical Centre in Leiden, The Netherlands. He is also a member of the Dutch Health Council (“Gezondheidsraad”), Standing Committee on ‘Nutrition’.

First part

**Nutrition and chronic disease: an evolutionary perspective**
The first part of my lecture will cover the changes our food intake went through over millions of years, the mismatch between what we eat and our physiology and its impact on the pathogenesis of chronic disease.

Second part
Calorie restriction and the management of (type 2) diabetes mellitus
In the second part of my lecture I will discuss the pathophysiology of the metabolic syndrome and type 2 diabetes.

Readings
b) Intermittent fasting vs daily calorie restriction for type 2 diabetes prevention: a review of human findings ADRIENNE R. BARNOSKY et. al Translational Research Volume 164, Number 4

WEEK 3 class meets remotely

Monday, June 1

Readings:

Tuesday June 2nd
MIDTERM

MIDTERM COVERS UP TO MONDAY LECTURE ON GENETICS OF AGING IN MICE AND HUMANS

Wednesday, June 3
Readings:

Biological Mechanisms of Physical Activity in Preventing Cognitive Decline.

Thursday, June 4:
Nutrition, dietary restriction, aging and diseases: Parts 1 and 2. From the fundamental role of various nutrients on aging in model organisms and mammals, to the Mediterranean diet to the diets of long-lived and short-lived populations from around the world and their effect on life span and diseases. Valter Longo. Remotely, 2-4:50 pm.

Readings:

Extending the Healthy Life span: from yeast to humans. Fontana, L, Partridge, L., Longo VD. Science, April 16, 328, 321-6

Olive Oil and Cardiovascular Health Mar’ia-Isabel Covas. Cardiovasc Pharmacol Volume 54, Number 6, December 2009

Friday June 5:
1) Continue June 3 lecture: Nutrition, dietary restriction, aging and diseases (Valter Longo). Remotely, 2-4:50 pm.
WEEK 4 class meets remotely

Monday, June 8: **CLASS AT 9-12 AM California Time**

**Aging, healthcare and diseases in Genoa.** Prof. P. Odetti and Prof. Dijk University of Genoa. How this port city reached one of the highest over 65 population in the world (estimated at over 26%) and how the City handles it. Lecture by Professor and Chief of Geriatrics at Genoa’s San Martino Hospital Patrizio Odetti. Prof. Odetti is one of the leading experts in Geriatric medicine in Italy. Prof. Monacelli will focus on the geriatric community and healthcare in Liguria. Prof. Nencioni will instead focus on the basic and clinical aspects of cancer, with focus on treatment and the elderly.

**Prof. P. Odetti**

**Demographic data on Liguria**

Liguria is an Italian County characterized by an high prevalence of elderly (beyond 25% of >65 years old subjects). The main causes of this dramatic modification of the population lie on the low birth rate, the increased women/(men) longevity and the return of Italian emigrates. The demographic change has modified the health care request of the population. The elderly, when sick, turn to the Emergency Department to fulfill their medical need instead of addressing to the general practitioner causing an overcrowded and busy first aid. The strategy of health care local Authorities tries to face the problems as well as the new queries of the very old people.

**Prof. Dijk**

The Ligurian geriatric community health care and welfare network

Aging is associated with increased comorbidity and disability; on average 30% of subjects over 65 years need a kind of health care intervention and at least 10% of them suffer from disability or impairment in ADL. The general practitioner in Italy takes care of 200-300 geriatric patients, covering 70/80% of the overall geriatric medical care and assistance. The ongoing geriatric community health care network includes day hospital, daily, domestic health care stratified on intensity care levels, nursing homes both for non disabled and disabled patients and hospice for terminally ill patients. However the network is still fragmented and non homogeneous according to different geographical Italian areas with non conclusive outcomes in terms of economic and disability restraining. Then, there is a urgent need for integrated health care networks sharing multidisciplinary professionals, alternative to hospitalization, in order to fulfill the outgrowing and differentiated medical need of aging people.
Prof. A Nencioni, MD,

Cancer treatment in the elderly
Dr. Nencioni is an oncologist but also a leading basic researcher in the field of metabolism and cancer. He will talk about his work in the lab but also the standard therapies to treat age-related cancers including breast and prostate cancer. Since we are now in the midst of a demographic revolution as a result of aging of populations worldwide and approximately 60% of cancer incidence and 70% of cancer mortality occurs in individuals older than 65 the issue of proper management of elderly patients and, primarily, the avoidance of treatment-related toxicities has become of central importance. "Elderly patients are especially likely to experience complications from chemotherapy, such as febrile neutropenia, nausea, anemia, osteoporosis, depression, insomnia, and fatigue. For many patients, symptoms may be addressed both through lifestyle management and pharmaceutical approaches" (Naeim A, JCO, 2014). In addition, short courses of starvation (or of starvation-mimicking diets) may be useful for preventing or reducing at least some of the side effects of chemotherapy. Scores for predicting the toxicity of chemotherapy in the elderly are also available and they could be applied to identify those patients who should receive less toxic treatments or just palliative care vs. those that should be treated with standard chemotherapy (with or without biological agents) as if they were “young”. Overall, "the key to improving quality of life in the elderly patient with cancer is an awareness of their specific needs and a familiarity with emergent treatment options" (Naeim A, JCO, 2014).

Clinical aspects of Alzheimer’s diseases  Fiammetta Monacelli, MD
Alzheimer disease: pathogenesis and natural history: focus on cognitive deficit, psycho affective and behavioural disturbances, neuropsychological assessment and therapeutic options. The presentation will focus on the cornerstones of Alzheimer disease (AD) pathogenesis, deal with the diagnostic assessment , the natural course of the disease and the most relevant clinical features of the neurodegenerative process. The presentation will also focus on the comprehensive geriatric assessment of AD patients , in order to assess the patient’ cognitive domain, the comorbidity status, the functional status, the psychoaffective and behavioural disturbances, the gait and balance , summarizing the standard reference tools , with particular regard to the neuropsychological assessment. Then a overall view of the therapeutic options will be provied, discussing also the non pharmacological approaches to AD patients. Dr. Monacelli is a clinical geriatrician and an expert in Alzheimer’s disease and glycooxidation.

Readings

**Readings**

Systematic review of preoperative, intraoperative and postoperative risk factors for colorectal anastomotic leaks  F. D. McDermott¹, A. Heeney¹, M. E. Kelly¹, R. J. Steele², G. L. Carlson³ and D. C. Winter¹  *BJS* 2015; 102: 462–479
