Course Description

This course introduces students to the multi-disciplinary, and exciting field of microelectromechanical systems (MEMS). Topics covered in this course include scaling laws involved in MEMS, material properties, structural mechanics, basic sensing and actuation principles, fabrication and device integration, typical MEMS devices and applications, and latest developments in the field.

Learning Objectives

This course aims at providing a comprehensive understanding of science and technology of MEMS, with an emphasis on the underlying mechanics, structures, electrostatics, and dynamics in the design and fabrication of MEMS for real-world applications. After completing this course, students should be able to:

- (a) Understand fundamental principles of sensing and actuation and corresponding scaling laws in MEMS
- (b) Gain a comprehensive perspective of various fabrication processes and materials used in microfabrication
- (c) Understand the principle, design, and fabrication techniques of leading exemplary devices in the MEMS industry
- (d) Design basic MEMS devices using relevant mechanical/electrical/fluidic engineering principles

Prerequisite(s): background in undergraduate-level structural mechanics and fluid mechanics is necessary.
