

[CSCI 426] Game Prototyping

Fall 2020

Lectures:	Wed 2:00pm-5:20pm	Classroom:	Blackboard / Zoom / Piazza
Instructor:	Andy Nealen	Office:	Zoom, by email apointment
Office Hours:	TBA	E-mail:	nealen@usc.edu

SA: Sterling Rios (sterlinr@usc.edu). **Office hours:** TBA

Syllabus: Game Prototyping is about designing, programming, and testing game ideas fast, and with as little effort as possible, while gaining knowledge about what does and does not work.

This course is about experimental game design. This experimental mindset pertains to every aspect of the game, and these can be broadly characterized as the game system, control, visuals, audio, and resulting theme. We will explore these aspects through the creation of numerous very focused (video)game prototypes using Unity as our game engine/tool of choice. This will allow us to obtain a better understanding of what makes games appealing, and how game mechanics, systems, audiovisuals, and a variety of player experiences can be designed and iteratively improved by means of rapid prototyping and playtesting. The course is a combination of the technology, design, and philosophy underlying contemporary game creation, as well as the real-world implementation and design challenges faced by practicing game designers.

Target Audience: The course is intended for students who want to learn design practices and principles by which games can be conceived, prototyped, and developed within a one-semester course. Students will create weekly prototypes in teams of two, as well as complete one final large team project. The course is a lot of (team)work, but it's also a lot of fun.

Prerequisites: There are no formal prerequisites, but basic programming skills are required. Artistic skills, or a willingness to learn them are a plus, as is familiarity with the Unity game engine.

Readings: We will discuss articles on experimental game design, game feel, game theory, and systems theory, as well as analyze a variety of successful videogames such as Getting Over It, Desert Golfing, Spelltower, Super Hexagon, Spelunky, Osmos, Canabalt, Flappy Bird, Tetris, etc. A playing and reading list will be provided and expanded throughout the semester, and we will discuss some of the readings in class.

Lectures: Topics include but are not limited to: an introduction to experimental game design, abstraction, prototyping, systems and feedback loops, input and control, space-time discretization, minimal graphic design, game feel, design patterns, human perception, game programming, etc. Each class meeting will consist of a short lecture, followed by student presentations, critique, and class discussion. Each class meeting will end on the design prompt for the following week.

Projects: Students will design and implement 8 videogame prototypes in the first 10 weeks in weekly rotating teams of two (*prototype* phase). We will announce the teams and design prompt for the following week at the end of each class. Thereafter we will form teams of 4-6 students around the best prototypes, followed by a final polish cycle of 2 weeks, in which these teams will iterate on one of the prototypes in order to polish and balance the game (*production* phase).

Expected Work: Students will design, implement, play-test, and present 8 prototypes in teams of two, and one final game project as a team of 4-6. We have chosen to use Unity for the prototypes,

and we will provide demos and demo code for the weekly design prompts as needed. Each of the prototypes as well as the final project will be presented by the students or team in class. It is expected that each class participant set aside 10 hours per week (outside of class) to work on their games.

Exams: There will be a final presentation by each team (including each team member) on the design and development of the final project. Aside of the final game, each team is expected to hand in a 2-page post-mortem document in the week after final presentation (finals week).

Grades: Each student will present and submit 8 prototypes, out of which we will grade the best 6, participate in a final project, and comment on games designed by their peers. The weighting is as follows: **Prototypes: 70%, Final Project/Polish: 20%, Class Participation: 10%**. I reserve the right to adjust the grading scale. To receive a good grade, you will need to perform well in the prototypes, final project, and in class participation. Please check the correctness of the grading and the posted scores immediately after we announce the availability of the scores. You will need to let me know about any grading issue within 7 days of me posting the score.

General Policy: To ensure a quality course for all participants, **presence at the weekly class meetings is mandatory**, unless otherwise stated. To promote professional behavior, please be in class on time. **Every unexcused absence or late arrival will result in a third of a grade loss** (e.g. A to A-) in your final grade. Please communicate in a timely manner if you can't make it to class.

Academic Integrity: USC seeks to maintain an optimal learning environment. General principles of academic honesty include the concept of respect for the intellectual property of others, the expectation that individual work will be submitted unless otherwise allowed by an instructor, and the obligations both to protect one's own academic work from misuse by others as well as to avoid using another's work as one's own. All students are expected to understand and abide by these principles. *We will strictly enforce the student conduct code and refer students to the Office of Student Judicial Affairs and Community Standards for further review, should there be any suspicion of academic dishonesty, and suggest that they follow the recommended sanctions in case they should find that there was academic dishonesty.* We typically suggest an F as overall class grade as penalty, if asked. Scampus, the Student Guidebook, contains the student conduct code and the academic review process: <https://sjacs.usc.edu/students/academic-integrity/>.

Problems and Concerns: At some point, you will have questions. For example, you might not be able to get code to run, there might be something in the lectures that you do not understand, and so on. In this case, we encourage you to post the question on the slack/discord workspace and see whether someone can help you. If this approach does not generate the desired result, then I will be happy to help you in person during my office hours. I do answer email but, unfortunately, often I will not manage to answer it on the same day. It is very important that you voice your concerns about any aspect of the class as soon as they arise. Please send me an e-mail, or come talk to me in person/on zoom.

Tentative Schedule: Weekly lectures and design prompts for the prototypes will be adjusted according to the current design topic most relevant to the student projects. Topics include prototyping, visual abstraction, game feel, systems design, feedback loops, strategy and dexterity, uncertainty and luck, physics-based control and animation, game complexity, design patterns, accessibility and human perception, semiology of graphics, game difficulty and balance, sources of creativity, AI methods and procedural content generation (PCG), characteristics of games, and interaction design

(lecture in bold, homework and presentation in italics, subject to change)

#	Date	Topic(s)
1	1/20	00 Introduction <i>Prototype 0 assigned (Unity first steps + exploration)</i>
BASICS		
2	1/27	01 Game Feel <i>Prototype 0 presented (optional), prototype 1 assigned</i>
3	2/3	02 Theme + Mechanics <i>Prototype 1 presented, prototype 2 assigned</i>
4	2/10	03 Characteristics <i>Prototype 2 presented, prototype 3 assigned</i>
ADVANCED		
5	2/17	04 Systems + Balance <i>Prototype 3 presented, prototype 4 assigned</i>
6	2/24	05 Discretization <i>Prototype 4 presented, Prototype 5 assigned</i>
7	3/3	06 Procedurality + Randomness <i>Prototype 5 presented, Prototype 6 assigned</i>
APPLIED		
8	3/10	07 Accessibility + Semiology <i>Prototype 6 presented, prototype 7 assigned</i>
9	3/17	08 Difficulty + Obfuscation <i>Prototype 7 presented, prototype 8 assigned</i>
PITCH + POLISH		
10	3/24	09 Pitching + Other <i>Prototype 8 presentation, prototype pitch assigned</i>
11	3/31	Prototype pitches, voting, and team assignment
12	4/14	<i>Team presentation 1, team presentation 2 assigned</i>
13	4/21	<i>Team presentation 2, final presentation assigned</i>
14	4/28	Final presentation

Title IX: Harassment, sexual misconduct, interpersonal violence, and stalking are not tolerated by the university. All faculty and most staff are considered Responsible Employees by the university and must forward all information they receive about these types of situations to the Title IX Coordinator. The Title IX Coordinator is responsible for assisting students with supportive accommodations, including academic accommodations, as well as investigating these incidents if the reporting student wants an investigation. The Title IX office is also responsible for coordinating supportive measures for transgender and nonbinary students such as faculty notifications, and more. If you need supportive accommodations you may contact the Title IX Coordinator directly (titleix@usc.edu or 213-821-8298) without sharing any personal information with me. If you would like to speak with a confidential counselor, Relationship and Sexual Violence Prevention Services (RSVP) provides 24/7 confidential support for students (213-740-9355 (WELL); press 0 after hours).
