AME 481
Aircraft Design
Units: 4

Instructor: Marty K. Bradley, Ph.D
Email: mkbradle@usc.edu
Office Hours: THH 118, Mondays 6:20pm–7:20pm
Virtual Office Hours: Tuesdays 4:00pm–5:00pm

Instructor: David S. Lazzara, Ph.D
Email: lazzara@usc.edu
Office Hours: THH 118, Mondays 6:20pm–7:20pm
Virtual Office Hours: Thursdays 4:00pm–5:00pm

Instructor: Hubert Wong
Email: hubertwo@usc.edu
Virtual Office Hours: Fridays 10:00am–12:00pm

Grader: TBD
Email: igundava@usc.edu

Lecture Room: THH 118
Lecture Time: Mondays 3:30pm–6:20pm

Lab Room: SAL 127
Lab Time: Wednesdays 5:00pm–7:50pm

Course Description

This course provides a comprehensive overview of principles and analysis related to aircraft design. Various topics are presented to summarize an organized approach to aircraft design problems with a multidisciplinary emphasis. Lectures provide a summary of design principles, aircraft components, specifications, design best-practices, conventional and unconventional vehicles, and information on quantifying aircraft performance at the system and sub-system level. Lab sections will provide practical implementation of lecture material, including in-depth instruction on exercising various analysis and design tools for aerodynamics, structures, configuration layout, CAD and many other topics. Both lectures and labs will enable students to analyze and design existing or new aircraft configurations via a variety of weekly homework assignments and a design project presented at the end of the semester.
Assignments

Homework assignments will be assigned most weeks throughout the semester in lecture and will be due by the start of lab the following week. Lab assignments will be assigned in most labs and will either be due at the end of the lab section or before the start of the next lab section. Assignments should be submitted electronically in PDF format via the Blackboard class website.

The homework, lab, and project assignments are designed for students to practice and demonstrate important skills pertaining to aircraft design. Students will be expected to apply the resources and material taught in lecture, lab and prior engineering course-work when completing assignments for this course.

Most homework assignments are related to the aircraft design project by working you through the processes you will need to follow to complete a task in the project. Some homework assignments will not be directly related to the aircraft design project, but nevertheless will provide practice and demonstrate other important skills or information. For the student’s convenience, some lectures, labs, and homework material may reference the sections of the project they support.

An airline customer network study will be conducted early in the semester and will determine the aircraft design missions for the aircraft design project later in the semester. Students will make group presentations.

An aircraft design project will be assigned approximately halfway through the semester. Students will submit their own formal project report at the end of the semester as well as a group presentation. These will also be submitted electronically in PDF format to the Blackboard website. See the project definition document for further information.

Course Grading

The grading scale for AME 481 is summarized as follows:

<table>
<thead>
<tr>
<th>Assignment</th>
<th>Weighting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Homework</td>
<td>30%</td>
</tr>
<tr>
<td>Total Lab Assignments</td>
<td>20%</td>
</tr>
<tr>
<td>Network Study Results Presentation</td>
<td>5%</td>
</tr>
<tr>
<td>PDR Presentation</td>
<td>10%</td>
</tr>
<tr>
<td>Final Project Report</td>
<td>35%</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>100%</strong></td>
</tr>
</tbody>
</table>

Each homework assignment is weighted equally in the final grade. Late assignments will not be accepted, except for verified medical reasons.
Grade Definitions

The USC Office of Academic Records and Registrar provides the following grade definitions used in this course (see Grading and Correction of Grades Handbook):

<table>
<thead>
<tr>
<th>Grade</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Work of excellent quality</td>
</tr>
<tr>
<td>B</td>
<td>Work of good quality</td>
</tr>
<tr>
<td>C</td>
<td>Work of fair quality</td>
</tr>
<tr>
<td>D minus</td>
<td>Work of minimal passing quality</td>
</tr>
<tr>
<td>F</td>
<td>Work that does not meet minimal standards for passing the course</td>
</tr>
</tbody>
</table>

</table>
Week | Date | Lab | Material
--- | --- | --- | ---
1 | Jan. 11 | 1 | Lab Introduction + Jetsizer Tutorial and Mission Sizer
2 | Jan. 18 | 2 | Aircraft Operations
3 | Jan. 25 | 3 | Fuselage Design
4 | Feb. 1 | 4 | Propulsion Sizing
5 | Feb. 8 | 5 | Aerodynamic Performance
6 | Feb. 15 | 6 | Network Analysis and Optimization
7 | Feb. 22 | 7 | Configuration Design
8 | Mar. 1 | 8 | Group Presentations: Network Analysis System Requirements Review (SRR)
9 | Mar. 8 | 9 | Finite Element Modeling
10 | Mar. 15 | | No Class
11 | Mar. 22 | 10 | High-Lift System Design
12 | Mar. 29 | 11 | Stability & Control
13 | Apr. 5 | - | Preliminary Design Review (PDR) Group Presentations
14 | Apr. 12 | 12 | Design Optimization and Trade Studies
15 | Apr. 19 | 13 | Unique Trade Studies
16 | Apr. 26 | 14 | Final Project Question Session

Lab Assignments will be started during lab and completed outside the lab if necessary. Students that have previously approved “Time Conflict Forms” for the AME-481 Lab will have to give priority to lab sessions. Most AME-481 Labs will have live interactive projects and there will be live Group Presentations on March 1st and April 5th.

**Learning Outcomes**

Students will develop and document a comprehensive aircraft design that includes consideration of:

- Proper verbal and written communications including making presentations, writing, drawing, and graphing
- Phases of an aircraft program (requirements development, conceptual design, preliminary design, production, operations, end of life)
• Customer requirements development and validation
• Aircraft design tools
• Mission performance and vehicle sizing
• Aircraft configuration layouts
• Aerodynamic design and optimization
• Aircraft propulsion
• Mass properties
• Aircraft systems
• Structural design
• Stability and Control
• Aircraft and airline economics
• Trade studies and optimization
• Safety and ethical issues
• Environmental impact and sustainability
• Alternative aircraft fuels, propulsion, and configurations
• Current developments, future technologies, and the need for lifetime learning.

Upon completion, the student will be able to:

• Configure an aircraft to meet specified design requirements;
• Design an airfoil;
• Model elements of the aircraft design in software;
• Analyze overall aircraft performance; and
• Prepare and present a series of design briefings similar to those done in industry.

Relation of the Course to ABET Program Outcomes: This course contributes primarily to ABET General Student Outcomes: (1), (2), (3), (4), and (7).

• (1) An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
• (2) An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
• (3) An ability to communicate effectively with a range of audiences

• (4) An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts

• (7) An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Academic Integrity

Each student is responsible for completing and submitting their own work on assignments. Students are encouraged to discuss the assignments, but must ensure there is no plagiarism involved when creating and submitting their own work. Plagiarized assignments will receive no credit; students will only receive credit for their own work. Before submitting any assignment in AME 481, please ask the instructor to clarify any questions regarding what constitutes plagiarism if ambiguity exists. The following is a non-exhaustive list of examples that will be considered plagiarism:

• Copying codes/scripts programmed by someone else and submitting it without proper reference to the original author.

• Submitting copies of another student’s completed assignment, in whole or in part, as one’s own.

• Submitting plots or images not generated by the student and without proper reference to the original author.

• Submitting tables of text and/or data not generated by the student and without proper reference to the original author.

• Submitting text not generated by the student and without proper reference to the original author.

In order to minimize the likelihood of committing plagiarism, students shall do the following on AME 481 assignments:

• Program their own code and scripts.

• Create their own plots and images; reference the source of images they did not generate themselves.

• Write their own mathematical derivations.

• Write their own text in response to assignment questions.

• Write their own tables of text and/or data.
• Report data and results as generated by the codes/scripts the student programmed themselves.

AME 481 students suspected of plagiarism will be reported to the USC Student Judicial Affairs and Community Standards (SJACS) office for academic integrity violations. The official USC statement on academic integrity is the following (copied verbatim from http://www.usc.edu/schools/GraduateSchool/academic_conduct.html):

Statement on Academic Conduct and Support Systems

Plagiarism - presenting someone else’s ideas as your own, either verbatim or recast in your own words - is a serious academic offense with serious consequences. Please familiarize yourself with the discussion of plagiarism in SCampus in Part B, Section 11, Behavior Violating University Standards and Appropriate Sanctions, accessible here: http://studentaffairs.usc.edu/scampus/ Other forms of academic dishonesty are equally unacceptable. See the university policies on scientific misconduct: http://policy.usc.edu/scientific-misconduct

Discrimination, sexual assault, and harassment are not tolerated by the university. You are encouraged to report any incidents to the Office of Equity and Diversity http://equity.usc.edu/ or to the Department of Public Safety via either of these forms: http://dps.usc.edu/contact/report/ or http://web-app.usc.edu/web/dps/silentWitness/
The Center for Women and Men http://engemannshc.usc.edu/cwm/ provides 24/7 confidential support, and the sexual assault resource center webpage http://sarc.usc.edu/ describes reporting options and other resources.

Help with scholarly writing is provided by a number of USC’s schools. Check with your advisor or program staff to find out more. Students whose primary language is not English should check with the American Language Institute http://ali.usc.edu, which sponsors courses and workshops specifically for international graduate students.

Help arranging accommodation for students with disabilities is provided by the Office of Disability Services and Programs http://dsp.usc.edu

Emergency information will be posted at http://emergency.usc.edu. If an officially declared emergency makes travel to campus infeasible, this website will provide safety and other updates, including ways in which instruction will be continued by means of Blackboard, teleconferencing, and other technology.

Due to the COVID-19 pandemic special accomodations may need to be made. IN the past, USC may altered certain semester registration and grading practices and students should refer to university communications. Some lectures and labs could switch to being virtual. If you need special personal accomodations due to illness, exposure or possible exposure, quarantine restriction, or a requirement to take care of a family member, please let your professors know as early as possible to work out the issue.
