Course Description

This course provides an understanding of the mechanics of deformable materials and structures. It introduces the concepts of stress and strain, and basic structural elements like rods, beams, and shearing and bending elements.

Learning Objectives

The learning objectives associated with this course are:

1. Understanding of stress and strain in a solid.
2. Analyzing the deflection of a rod under axial stress.
3. Analyzing the torsion of beams.
4. Analyzing the bending of beams.
5. Ability to transform stresses and strains.
6. Understanding of energy methods to analyze structures.

Prerequisite(s): AME 201 or CE 205

Co-Requisite(s): none.

Concurrent Enrollment: none.

Recommended Preparation: none.

Course Notes

The course will include lectures presented in the classroom. These lectures and other information pertaining to the course will be posted on Blackboard.
