USC Mann
Alfred E. Mann School of Pharmacy
and Pharmaceutical Sciences

BPSI 403: Biopharmaceutics II

Coordinator: Hovhannes J. Gukasyan, PhD
Associate Professor, Department of Pharmacology and Pharmaceutical Sciences
University of Southern California
Email: gukasyan@usc.edu
Office Phone: (323) 442-1362
Office Location: HSC campus PSC 716
Office Hours: by appointment

Instructors: Daryl L. Davies, PhD
Professor, Department of Clinical Pharmacy
University of Southern California
Office: HSC campus PSC 506
Email: ddavies@usc.edu
Office Phone: (323) 442-1427
Office hours: by appointment

Course Weight: 4 Units (two weekly 1.5-hour sessions; computer simulations lab with three practice assignments which will be combined as a final report to be submitted on the day of the final exam)

Catalogue description: Comprehensive overview of late-stage drug discovery and early-stage medicinal product development; introduction to the biopharmaceutical classification system, \textit{in vitro} and \textit{in vivo} assays through \textit{in silico} simulations and modeling, drug delivery and safety sciences & technology

Day/Time/Location: M/W, 3:30-4:50pm, CPA (/DMC) 209

Introduction and Purpose

This introductory course will provide students with a comprehensive overview of tier-1 (early drug discovery and medicinal product development) \textit{in vitro} and \textit{in vivo} assays simulations and modeling, biopharmaceutical classification system, and drug delivery and safety sciences & technology. Biopharmaceutical modeling has become integral to the design and development of new medical products. Influencing key aspects of the development process, including drug substance design, formulation design, and toxicological exposure assessment, biopharmaceutical modeling is now seen as the linchpin to any new medicinal products’ future success. Biopharmaceutics II is a multidisciplinary course encompassing areas of study that employ basics of general chemistry, biology (biosystems), and mathematics (calculus), addressing
formulation and delivery of drugs using commercially available modeling and simulations computer software.

By applying concepts of Pharmacology and Pharmaceutical Sciences to various dosage forms, routes of administration, and their interchangeability students will be introduced to scientific and regulatory understanding of bioavailability and bioequivalence. Basic and applied chemistry, biology, mathematics, physics, and chemical engineering concepts as they relate to medicinal products will be applied to exemplify approaches in building physiologically based pharmacokinetic simulation models. Topics in this course will include principals of pharmacokinetics, physical pharmacy, drug design and development, as well as pharmaceutical biotechnology. Applied mathematics in the quantitation of drug concentrations will be introduced (computer lab) to study absorption, distribution, metabolism, and elimination of drugs.

Virtual ‘healthy volunteers’ and ‘preclinical animal species’ will be used in computer simulations, focusing on visualizing kinetic processes describing rates of Absorption, Distribution, Metabolism and Excretion (ADME). A bridge between dosage form characteristics (i.e., type solid vs liquid – pills and injections; route of administration – enteral and parenteral) with potential systemic exposure outcomes will be constructed to understand importance of matching specifications of ‘blood concentration vs time’ profiles. Students will have the opportunity of learning with literature data (using Gastroplus® software) and generating in vitro solubility/permeability and in vivo pharmacokinetic parameters applying information to absolute drug-dose determination and adjustment. Concepts of translation of these parameters will also be introduced. Students’ understanding of basic biopharmaceutics and pharmacokinetic principles will be reinforced preparing them to apply knowledge gained in the design, implementation, and management of pharmacotherapy in a variety of real-world settings.

Principles introduced in this course will familiarize students with biopharmaceutical classification and formulation sciences terminology, including key concepts related to the processes of equivalence (generics and biosimilars) and will help set the stage for future, more sophisticated course work necessary for the student to gain a level of competency to be successful in the biopharmaceutical drug discovery and development setting. Beginning with a focus on the oral absorption of drugs, BPSI 403 discusses the central dogma of oral drug absorption (the interplay of dissolution, solubility, and permeability of a drug), which forms the basis of the biopharmaceutical classification system (BCS), using in silico tools, i.e. virtual computer-software based, that are widely adapted by progressive drug development companies and global regulatory agencies (e.g. US FDA).

To help prepare the student for the ever-changing environment, this course will present foundational and newly advancing modeling and simulation technologies to provide knowledge regarding critical aspects of medicinal product development. Additionally, the course coordinator will try to invite one or more guest lecturers from biotech/pharma industry to speak about their jobs and career opportunities/trajectories.

**Objectives**

This course a continuation of BPSI 402, Biopharmaceutics I. In BPSI 403, students will learn applications of physicochemical properties of drugs as they impact medicinal product
development. Characteristics including solubility and dissolution kinetics, permeability, and the influence of dose-formulation will be systematically evaluated in solid or liquid drug dosage forms administered via common routes to a virtual/simulated body. Modulation of dissolution kinetics will be studied in parallel to biological membrane diffusion/permeability to exemplify the effect these biopharmaceutical properties have on pharmacokinetics of drug products. Content presented in this course will enable students to acquire a strong understanding of the step-by-step processes involved in the role and importance of solid-state and ionizable/reactive drug functional group properties on the dosing, efficiency, and delivery of pharmaceutical products. Translational aspects of biopharmaceutical developability will be introduced to facilitate understanding interspecies relationships in safety, efficacy, and allometric dose scaling. Importance of gastrointestinal physiological effects (fasted vs fed state) and physicochemical factors (solubility and permeability) that influence the availability of a drug from different dosage forms (immediate vs modified release), and the subsequent disposition of the drug in the body will be introduced. Chapters from required textbooks will be supplemented with a variety of source materials, including articles from scientific journals and public websites. Case studies will be critically reviewed, and emerging “hot” topics discussed.

Upon successful completion of this course, the student should be able to:

• Understand physicochemical property descriptors of composite values of drug solubility and permeability.
• Understand principles of solubility, dissolution, and diffusion.
• Explain the differences between absolute bioavailability, relative bioavailability, and criteria of pharmaceutical bioequivalence.
• List reasons for incorporation of drugs into various dosage forms and describe the essentials of compounding practices by categorizing common excipients.
• Understand and be able to exemplify solid vs liquid dosage forms, and key biopharmaceutical blueprint attributes for oral vs intravenous administration of medicinal products.
• Define and comprehend basic pharmacokinetic principles modulated by dose, route of administration, and formulation of a medicinal product.
• Describe mechanisms of drug degradation and provide examples in vitro/in vivo settings of each.
• Describe various types of drug absorption from a pharmaceutical dosage form.
• Describe the physical and chemical characteristics of a drug that affect its dissolution from various dosage forms and explain how drug dissolution affects drug absorption.
• Perform pharmacokinetic analysis of given plasma drug concentration data and define the concept of oral bioavailability and bioequivalence.
• Compare and contrast advantages and disadvantages of the various types of tablet dosage forms.
• Define solubilization, list major factors affecting solubility, and perform calculations to determine appropriate parameters to establish maximum solubility.
• List physical and chemical characteristics of drugs that make them candidates for an extended-release, comparing/contrasting properties of common modified-release dosage forms.
• Explain the physical-chemical properties of drugs which determine their suitability to be incorporated into common dosage forms and differentiate between the various types of
systems used for oral vs. intravenous delivery.

- Identify and explain physiologic factors which influence the drug absorption from oral administration and identify key rate limiting physicochemical factors.

**Assignments and Grading:**

Class participation: 10 pts. (4 %)
*Up to 10 quizzes 50 pts. (20%)
  *Subject to change and pts/quiz value adjusted
Midterm Oral Presentation: 45 pts. (18 %)
  MS PowerPoint format
GastroPlus+ Case Study Report: 45 pts. (18 %)
  Written version using data from midterm oral presentation
  MS Word format
Final exam: 100 pts. (40 %)
Total: 250 pts.

**Class Participation and Attendance (10 pts):** On a scale of 10, 0-indicating no participation, 10-indicating best participation. You can therefore increase the probability of getting a higher mark by being proactive in terms of asking (relevant) questions in class and/or contributing to discussions.

Attendance at all classes is expected. Participation will include asking and answering questions and being actively involved in the discussion. It is expected that the students read the assigned papers prior to the lecture and be prepared to discuss background, current understanding, treatments, and gaps in knowledge for the topic in each lecture.

There will be up to 10 quizzes over the course of the semester that will primarily be based on questions pulled from the text book and lectures. Quizzes are rolled up into the class participation, and they are credit/no-credit based (live polls and games with immediate feedback in the classroom). The midterm oral presentation (45 points) is intended to be a ‘pulse-check’ and opportunity for feedback towards completing the final term-paper report.

A 5-10-page double-spaced essay based on a G+ simulation case study (deliverable) will be due by 11:59pm PST on the day of the final exam via posting on Blackboard or email to gukasyan@usc.edu. The report should include data from midterm oral presentation and focus on an applied pragmatic biopharmaceutical risk analysis of a hypothetical medicinal product.

Additional details will be presented during class and included in template/rubric slides and document.

Notes, books, calculators, electronic dictionaries, regular dictionaries, cell phones or any other aids are not allowed during exams.

Students will be asked to complete an anonymous critical evaluation of the course at its completion.
Course Readings

**Required Readings**

Additional text that students may find helpful:

Additional textbooks are not mandatory, however students interested in drug discovery process should consider their purchase to expand comprehension on BCS and drug delivery principles. The students will be able to use identified chapters in the text to support their learning process throughout the semester.

Other course materials including but not limited to the syllabus, supplemental reading assignments and additional handouts will be posted on [http://blackboard.usc.edu/](http://blackboard.usc.edu/). The students will also be encouraged to use the online discussions among students via Blackboard.

**Recommended Supplemental Readings**

User manual to GastroPlus® (current version) (SimulationsPlus, Lancaster, CA)

**Online learning Etiquette (if applicable)**

- If it is not possible to have you webcam on during the entire class, do you best to have it on when speaking
- Turn off your microphone when not speaking
- If you need to step away from your computer during class (e.g. get a drink of water, use the bathroom, attend to a family member/pet) please do so quietly and without disturbing your classmates. Return to the class when you can.
  - Be aware the contents of conversations typed into the chat box, even private conversations, are visible by the instructors
Course Outline

This course will be in the format of a directed seminar/lecture under the guidance of the instructor for the specific session. During each weekly session the instructor will engage the students with questions and draw comments or interpretations primarily based on the assigned reading. Students are expected to ask questions and participate in an interactive fashion. Course coordinator reserves the option to invite one or more biopharmaceutical industry executives for guest lectures.

Course Content Distribution and Synchronous Session Recordings Policies

USC has policies that prohibit recording and distribution of any synchronous and asynchronous course content outside of the learning environment.

Recording a university class without the express permission of the instructor and announcement to the class, or unless conducted pursuant to an Office of Student Accessibility Services (OSAS) accommodation. Recording can inhibit free discussion in the future, and thus infringe on the academic freedom of other students as well as the instructor. (Living our Unifying Values: The USC Student Handbook, page 13).

Distribution or use of notes, recordings, exams, or other intellectual property, based on university classes or lectures without the express permission of the instructor for purposes other than individual or group study. This includes but is not limited to providing materials for distribution by services publishing course materials. This restriction on unauthorized use also applies to all information, which had been distributed to students or in any way had been displayed for use in relationship to the class, whether obtained in class, via email, on the internet, or via any other media. (Living our Unifying Values: The USC Student Handbook, page 13).

Academic Integrity

The University of Southern California is foremost a learning community committed to fostering successful scholars and researchers dedicated to the pursuit of knowledge and the transmission of ideas. Academic misconduct is in contrast to the university’s mission to educate students through a broad array of first-rank academic, professional, and extracurricular programs and includes any act of dishonesty in the submission of academic work (either in draft or final form).

This course will follow the expectations for academic integrity as stated in the USC Student Handbook. All students are expected to submit assignments that are original work and prepared specifically for the course/section in this academic term. You may not submit work written by others or “recycle” work prepared for other courses without obtaining written permission from the instructor(s). Students suspected of engaging in academic misconduct will be reported to the Office of Academic Integrity.

Other violations of academic misconduct include, but are not limited to, cheating, plagiarism, fabrication (e.g., falsifying data), knowingly assisting others in acts of academic dishonesty, and
any act that gains or is intended to gain an unfair academic advantage.

The impact of academic dishonesty is far-reaching and is considered a serious offense against the university and could result in outcomes such as failure on the assignment, failure in the course, suspension, or even expulsion from the university.

For more information about academic integrity see the student handbook or the Office of Academic Integrity’s website, and university policies on Research and Scholarship Misconduct.

Statement on Academic Conduct and Support Systems

Academic Integrity:
The University of Southern California is a learning community committed to developing successful scholars and researchers dedicated to the pursuit of knowledge and the dissemination of ideas. Academic misconduct, which includes any act of dishonesty in the production or submission of academic work, comprises the integrity of the person who commits the act and can impugn the perceived integrity of the entire university community. It stands in opposition to the university’s mission to research, educate, and contribute productively to our community and the world.

All students are expected to submit assignments that represent their own original work, and that have been prepared specifically for the course or section for which they have been submitted. You may not submit work written by others or “recycle” work prepared for other courses without obtaining written permission from the instructor(s).

Other violations of academic integrity include, but are not limited to, cheating, plagiarism, fabrication (e.g., falsifying data), collusion, knowingly assisting others in acts of academic dishonesty, and any act that gains or is intended to gain an unfair academic advantage.

The impact of academic dishonesty is far-reaching and is considered a serious offense against the university. All incidences of academic misconduct will be reported to the Office of Academic Integrity and could result in outcomes such as failure on the assignment, failure in the course, suspension, or even expulsion from the university.

For more information about academic integrity see the student handbook or the Office of Academic Integrity’s website, and university policies on Research and Scholarship Misconduct.

Please ask your instructor if you are unsure what constitutes unauthorized assistance on an exam or assignment, or what information requires citation and/or attribution.

Students and Disability Accommodations:
USC welcomes students with disabilities into all of the University’s educational programs. The Office of Student Accessibility Services (OSAS) is responsible for the determination of appropriate accommodations for students who encounter disability-related barriers. Once a student has completed the OSAS process (registration, initial appointment, and submitted
documentation) and accommodations are determined to be reasonable and appropriate, a Letter of Accommodation (LOA) will be available to generate for each course. The LOA must be given to each course instructor by the student and followed up with a discussion. This should be done as early in the semester as possible as accommodations are not retroactive. More information can be found at osas.usc.edu. You may contact OSAS at (213) 740-0776 or via email at osasfrontdesk@usc.edu.

Support Systems:

*Counseling and Mental Health* - (213) 740-9355 – 24/7 on call
Free and confidential mental health treatment for students, including short-term psychotherapy, group counseling, stress fitness workshops, and crisis intervention.

*988 Suicide and Crisis Lifeline* - 988 for both calls and text messages – 24/7 on call
The 988 Suicide and Crisis Lifeline (formerly known as the National Suicide Prevention Lifeline) provides free and confidential emotional support to people in suicidal crisis or emotional distress 24 hours a day, 7 days a week, across the United States. The Lifeline is comprised of a national network of over 200 local crisis centers, combining custom local care and resources with national standards and best practices. The new, shorter phone number makes it easier for people to remember and access mental health crisis services (though the previous 1 (800) 273-8255 number will continue to function indefinitely) and represents a continued commitment to those in crisis.

*Relationship and Sexual Violence Prevention Services (RSVP)* - (213) 740-9355(WELL) – 24/7 on call
Free and confidential therapy services, workshops, and training for situations related to gender- and power-based harm (including sexual assault, intimate partner violence, and stalking).

*Office for Equity, Equal Opportunity, and Title IX (EEO-TIX)* - (213) 740-5086
Information about how to get help or help someone affected by harassment or discrimination, rights of protected classes, reporting options, and additional resources for students, faculty, staff, visitors, and applicants.

*Reporting Incidents of Bias or Harassment* - (213) 740-5086 or (213) 821-8298
Avenue to report incidents of bias, hate crimes, and microaggressions to the Office for Equity, Equal Opportunity, and Title for appropriate investigation, supportive measures, and response.

*The Office of Student Accessibility Services (OSAS)* - (213) 740-0776
OSAS ensures equal access for students with disabilities through providing academic accommodations and auxiliary aids in accordance with federal laws and university policy.

*USC Campus Support and Intervention* - (213) 740-0411
Assists students and families in resolving complex personal, financial, and academic issues adversely affecting their success as a student.

*Diversity, Equity and Inclusion* - (213) 740-2101
Information on events, programs and training, the Provost’s Diversity and Inclusion Council, Diversity Liaisons for each academic school, chronology, participation, and various resources for students.

**USC Emergency** - UPC: (213) 740-4321, HSC: (323) 442-1000 – 24/7 on call
Emergency assistance and avenue to report a crime. Latest updates regarding safety, including ways in which instruction will be continued if an officially declared emergency makes travel to campus infeasible.

**USC Department of Public Safety** - UPC: (213) 740-6000, HSC: (323) 442-1200 – 24/7 on call
Non-emergency assistance or information.

**Office of the Ombuds** - (213) 821-9556 (UPC) / (323-442-0382 (HSC)
A safe and confidential place to share your USC-related issues with a University Ombuds who will work with you to explore options or paths to manage your concern.

**Occupational Therapy Faculty Practice** - (323) 442-2850 or otfp@med.usc.edu
Confidential Lifestyle Redesign services for USC students to support health promoting habits and routines that enhance quality of life and academic performance.
